Choosing Neurology Jobs As Career by Sambukhari

Article published on June 21st 2012 | Career

Considering a career in neurology nowadays is an excellent choice. The specialty is a growth area and extremely particularly varied, given the fact that there is an increasing demand for neurologists, with neurology jobs available both in the chronic neurological disorders' management and acutely (acute stroke, liaison neurology).

Why Is There An Increasing Need In The Neurological field?

The tremendous development of healthcare facilities and units has opened an abundance of healthcare opportunities, and these include Neurology jobs. The American medical health-related Association estimated for 2010 that there were approximately 13,330 neurologists in United States.

Neurology jobs are highly demanded nowadays because studies show that most district general hospitals require at least two neurologists, to take care of inpatient referrals from other specialists and GP referrals. In addition, the National Stroke strategy estimates that there is an increased need for specialists in various domains, including neurology, with experts in the care of neurovascular disease patients. Statistics show that in 2011, every NTN vacancy had four applicants overall.

Another reason causing the high demand in the neurological field is the aging population of USA. Several of the clinical conditions requiring neurologists' services increase with age, thus there is an increased need for neurology because of the graying of the country. Neuro-degenerative diseases and stroke both increase with age. As the mean age of US population is shifted up by baby boomers, specialists are in great demand. Although general neurologists represent the greatest demand on the field, overall both general and specialists are needed essential. All these can only be translated in a higher need for neurology jobs.

Furthermore, more people are estimated to have healthcare insurances in USA, and this might result in an increase demand for neurologists' services, therefore more neurology jobs should be created.

Predicting The Future

The estimated growth for physicians and surgeons' employment opportunities from 2008 to 2018 is 22%, as the population increases in age.

An article published in 2010 in the Neurology Clinics journal examining the future workforce of specialties concluded that no matter how many neurologists are currently practicing in the country at the time being, there will be a need for more. Co-authors Kenneth Vatz, MD, and Dr. David Freeman, MD, stated that the demand in the neurological field is expected to increase over the next decade, part because of the aging population of America.

As there is an increase in the number of sophisticated patients that seek specialty care more often, hospitals offer more Neurology jobs, and the healthcare environment is changing fast.

The number of insured people in America is expected to grow by approximately 32 million, if the affordable Care Act will not be repealed. This will translate in more patients that once could not afford medical health-related care to have coverage for office based-care, including neurology services.

Academy officials seem to believe that having enough neurologists is essential, as the neurological care demand is increasing. 16 million Americans are estimated to be diagnosed with Alzheimer by 2050, compared to 5.4 million today, by the Alzheimer Association. More than 3 million patients got to emergency with headaches in 2008. The number of Americans treated for Parkinson disease is nearly 1 million, with 60,000 new cases diagnosed yearly.

Conclusion

There is an obvious need for neurologists nowadays, and every thing indicates an increase in the number of future requests in this particular area. Neurology jobs offer is estimated to grow in the near future, Therefore As a result choosing a career in this area is an excellent choice.
