Dot Net Training Courses and Its Value Additions by Robin Peterson

Article published on March 20th 2012 | Career

Dot net, more commonly seen as .NET is a software framework for windows operating systems. It is simply a library of coding solutions for the production of applications used by computers Dot Net is a top-level domain, also known as TLD, used by web sites to help identify the type of website. Dot NET is used in reference to the word network. Two of other major TLdD are .com and .org

Dot Net technology is one of the most famous and advanced technologies these days In IT field, as this technology is one of the rare which comes with reduced application complexity. The feature which makes Dot Net different from other technologies are : 1) Universal Description, Discovery and Integration(UDDI) which is used to discover and publish public Web Services. 2) Simple Object Access Protocol which a suitable format to request web services. 3) Hyper Text Transfer Protocol (HTTP), communication protocol between different internet applications. Not all trainings provide you with real time project exposure through which you can understand the needs of I.T. industry.

Dot Net Value Additions: With our enormous experience in training and exhaustive research, they have developed a teaching methodology and structured the course in a way that it is scientifically best for any beginner to start learning MS.NET. All topics have been covered in simplest manner and most importantly in a very easy to understand language. Without assuming that you already have some programming background, Dot Net provides completely original copyrighted course material prepared from our past expertise. It includes overview of all Concept and Real time Walkthroughs and Code samples. This material can be your quick reference before attending an interview or for refreshing any concepts whenever needed. Help is readily available. You can post a query to an online technical support person of your choice and he will get back to you as early as possible.
