Article published on April 12th 2012 | Career

Plumbers are always in high demand everywhere to manage the water supply and repair the damaged pipes, toilets, sinks as well as water halves. They are needed in any institution or organization where humans live and work be it the residences or the commercial spaces. Thus, a plumbing career is really prospective if you are interested that way. But a successful plumbing career needs some considerable plumbing skills which should be adopted by every plumber in the market today. The article here aims to discuss about the different plumbing career skills you must achieve to be a credible plumber.

Academic skills:

Though the plumbing career is primarily concentrated on the technical aspects but a good plumber should be prepared in certain academic branches too. As a plumber you should hold a good grasp on mathematics, especially algebra, geometry as well as the applied mathematics skills. A plumber has to be knowledgeable regarding the water flow, pressure and volume measures. Thus, you have to equip yourself with good deal of science as well as math courses so that you get a good understanding of the precise measurements needed here.

Technical Knowledge:

The plumbing career skills need you have a considerable amount of technical knowledge and hence if one is a bit mechanically inclined then he is already well ahead in the field. A plumbing career demands you to know the operations of many generalized plus special tools. The different tools used here can be the simple ones like screw drivers to complex ones like pipe cutters, reamers as well as many power tools. Besides to be a successful plumber you have to be knowledgeable about the different construction materials and must have the ability to read and understand the blueprints.

In addition, since a plumber has to work in collaboration with many other tradesman such as the HVAC techs, electricians & carpenters, he must study and keep good knowledge regarding these varied trading nuances and methodologies so that he can have a better grasp of the entire process.

Other skills:

Plumbing is quite a physical job and a plumber has to work in different adverse situations like cramped, tight places, carry and move heavy tools and objects and might have to bend, crouch, climb and crawl repeatedly. Hence the plumber is needed to stay strong, flexible and agile as well so that he can adapt himself duly with the needed job situations and demands.
