How to Tell if That Underwear Pair Fits You Snugly by Kyle

Article published on April 10th 2012 | Clothing

Even though today's variety of underwear encompasses numerous models and styles, selecting the ideal pair of undergarments always entails taking into account several aspects and probably the most important ones are the size and the genital support they can provide.

However, when you are walking in a specialized store, you will most likely see the Bjorn Borg underwear displayed on perfectly sculpted mannequins that have very little to do with the body of the average person. As of such, the search for the perfect fitting undergarments becomes difficult and confusing. Not to worry though, this guide will list the basic criteria for purchasing comfortable, fitting and attractive-looking underwear.

Probably the simplest way of finding out whether a pair of boxers matches your size is measuring your waist first. Boxer manufacturers use the dimensions of the waist in standardizing the boxer models. For example, in case the dimensions of your waist are between 20 and 30 inches, then small-sized boxers will provide a comfortable fit. Alternatively, for individuals with 32 to 34 inches in waist, the medium boxer shorts are better suited, whereas for waists that exceed 36 inches a pair in the large or extra large category is necessary. Because underwear is not among the garments that you can try out before buying, keep these measurement specifications in mind.

Furthermore, plan the type of outfit that will incorporate your new Bjorn Borg underwear ahead in order to select an appropriate pair. Easier said than done, right? Not at all and here is what you should remember. Boxer briefs and trunks are the type of undergarments that adapt to your leg line and do not have the tendency of bunching up or developing visible lines. This makes them better suited for tight pants, but they also come with the downside of movement limitations. On the other hand, standard boxer shorts are known for detracting, but the movement impediments are limited. Consequentially, they are ideal for loose, baggy pants.

Next off, you will need to take into account the height of the boxers and the length of your leg plays an important role in the decision. To put it simply, people with long legs will benefit from the extended coverage of longer cut boxers, whereas the boxer briefs or trunks constitute an excellent choice for individuals with shorter legs. In addition, don't forget that the length of the boxer shorts will affect the level of comfort, because it will make all the difference on how well the pair will fit beneath the clothes.

Lastly, the environment in which you plan to wear the boxer shorts should also affect the decision regarding the length and of course, the coverage. In other words, longer boxer shorts can easily double as regular shorts to a certain extent. As of such, they need to be able to cover the genitals of the wearer completely, particularly if you share your apartment with other people or you plan to wear them at a pool party, for instance. However, if the role of the boxer shorts is specifically of undergarment, then the coverage can be decided solely based on the level of support.
