Colleges in Miami Offer Valuable Associate Degree Programs

by Amy Russell

Article published on January 23rd 2012 | College

Colleges in Miami hold a solid reputation for delivering quality education. With a wide range of choices of four-year universities and two-year colleges, the culturally diverse city represents the popular trend of preparing for a career by earning an Associate Degree.

Investing two years can save time and money without sacrificing quality. Two-year college programs eliminate general education classes focusing instead on courses related to a specific career. Depending on your career interest, the curriculum typically covers core classes in a semester with the remaining time devoted to a career field.

Qualifying for some of the hottest jobs in Miami and around the country require only two years of college. Even in a down economy, demand for workers in health and technology related jobs continue to grow at a rapid rate.

As the population grows and health care expenses increase, one of the jobs in highest demand is a medical assistant. Many geographic areas throughout the country cannot keep up with the demand for workers in this field. Within the next five years, the U.S. Bureau of Labor Statistics predicts a 35 percent increase in jobs for medical assistants.

If you are interested in a medical career, becoming a medical assistant will get you into the medical field. Once you have a job in the health industry, you can network for other educational and career-related opportunities while you earn money and gain valuable experience.

The role of a medical assistant requires a specific set of skills in a vital area. A medical assistant works closely with doctors. Performing tests with sophisticated equipment, assisting with medical procedures and recording accurate data are just a few of the duties of a medical assistant. All of these skills make an excellent foundation for eventual career advancement.

On a related note, if you want to become a medical assistant you should have a solid background in science courses including physics, chemistry and anatomy. Math classes and effective communication skills should also be areas of strength.

Careers related to technology are also in high demand. Many two-year colleges in Miami recognize the need for multi-media technical skills related to increased mobile formats. For instance, a two-year degree in graphic design can prepare you for a job as a Website designer.

Graphic designers fill a variety of jobs from creative projects like marketing campaigns to highly technical jobs working with advanced publishing programs. Colleges in Miami often provide a foundation of basic design skills. After the first semester of core classes, students can opt to explore specialized career choices.

Due to the competitive nature of sales, increases in multi-media advertising are expected to keep graphic designers employed in a steady job market. Insurance companies, financial corporations, publishing firms and other large businesses employ graphic designers.

If you plan on exploring a career in graphic design, you should enjoy interacting with others and working effectively as a team player. Computer skills and the ability to adapt to change are also needed in graphic design.

If you are planning on a career change or you are graduating from high school in the near future, technical schools and junior colleges in Miami can prepare you for a rewarding career in a high demand field in just two years.
