Article published on December 12th 2011 | College

Hydrocarbon refrigerant manufacturer and distributor the college of climate change has now proclaimed a new theme that is to support the go green environment campaign that is already in hot issues of the world. Under which all the necessary steps are being taken to stop the ozone gases from being depleted and to produce components that should not only be environment friendly but it should be helpful for the people as well.

In this regard college of climate change is not only offering such courses in which one is told about the hydrocarbons safe handling and their conversion so that an individual can learn about it but it can know the importance of those hydrocarbons refrigerant that are used in replacement of old R22 hydrocarbons which were banned by the Montreal protocol project in which they completely enforced a ban on the manufacturing and distribution of these hydrocarbons.

Furthermore the CFC which was the basic product or in other words, we may say, was an essential ingredient in the refrigerants to cool the daily life products. Likewise it was also used in all other products like AC, deep freezer etc.

And what happened was that it starts depleting the ozone layers and this is not the only damage that was done to the environment but it was the major source for Global warming. So these were totally eliminated in mid 90â€™s.And this is the reason that college of climate change is the one of the leading organization in Australia that is working for the betterment of the environment, in this regard they are the manufacturer and distributor of those Hydrocarbon refrigerant which are not only useful in several aspects but primarily are environment friendly.

So why not we join our hands to support these types of campaigns in which are meant to protect the environment but are playing the key role to facilitate the common user as you may want to know this fact that once you sign up to use the hydrocarbon refrigerant you will not only be helping in protecting the environment but the other advantage you will be having is that, the sound of the compressor will be reasonably reduced to add further this will also increase the performance of the refrigerator.

So if you want to save the ozone layer and stop the pollution created by the other non-environmental friendly products use the one which are being provided to you by the college of climate change. And if you require any further information you can visit collegeofclimatechange.com.au or you can call at (08) 6142 0799 or if you like you can also email about any concern you may have or any further information you want about the products and courses at info@collegeofclimatechange.com.au.
