Desktop SMS Service- Send Internet SMS, instantly and cost-effectively by Jack Samuls

Article published on July 20th 2012 | Communication

SMS or short message service, also known as text messaging is a very popular means of conveying written communications though cell phones. Desktop messages service is used for sending bulk number of messages or even single SMS from computers through desktops to mobile phones. This service brings exciting chargeable and non chargeable packages for the users. One has to load the pc, configure it and start sending text messages to all the desired people. It is easy to use desktop messenger software as it effortlessly starts sending through the websites to anyone the sender wishes to consign, whether in a group or individual.

Now days, people, especially business owners prefer to stay attached with their customers by keeping themselves online all the time, as it is necessary for them to stay connected with their customers. And through desktop messaging it has become much easier to stay engaged with the customers, because PC SMS service gives an opportunity of staying online every time.

SMS from PC service is also being preferred by the young people. Young generation is always trying to keep in touch with their friends. And being technology friendly, this service is gaining its popularity among young people too. As some of the organizations offer free downloads of the software for sending messages from desktops, this process is sometimes much preferred even than sending messages from mobile phones.

People prefer internet sms service in a large amount for its convenience and other special features which are far better than ordinary mobile phones. These websites are user-friendly; customers are needed to fill up an information chart (provided in the websites) with their personal data. And as they fill their charts, these services start within minutes. Some websites arrange free trials too for the first time users. The service packages come with different exiting offers which are convenient even than mobile service providers. It is easy to use, customer friendly, and is available simply by uploading personal information to the websites, and configuring their desktops according to the configuration given by the service provider.

This service send sms from pc easily imports database functionality. Integrates click button with Outlook, Outlook Express or its own. This also provides a guarantee of 100% gateway uptime. This service of sending messages from desktop not only delivers messages to mobile phones, but to landlines (text message enabled handsets)also. And most importantly, it forwards message replies to the mobile even when the desktop is shut-down, and keeps a track when messages are delivered to handsets. It also keeps a record of full reporting and audit trials. And provides an inbox too for the users to read incoming messages and also reply to them from their inbox. By keeping outbox and recently sent items track, it also helps the users to find sent and pending messages. This service provides its customers with messenger type notification of replies and non-HTTPS sending options. The software for messaging from desktops is offered by various popular brands and is loved by many users.
