Article published on June 21st 2012 | Communication

Remember when you used to run towards the telephone that was placed beside your bed, television or in the hall-room to attend the call? Does that not make you irritated whenever you heard a telephone bell ringing and you have to walk up to it to answer it? Then innovation took a new jump and the compact & handheld devices were introduced in the market. These latest devices were named mobile phones. So, exactly, what is a Mobile Phone? We all do have one, and that also some of the latest and coolest one. Gone are the days, when we were able to communicate only through telephones installed in our homes, offices and STD booths. Today, we can carry the same communication device with us in our pockets. Also known as cellular phone, these new age telephones help us in making or receiving calls while on the move via radio & satellite links of different networks. Also, these next generation hand phones support texting, MSS, email, internet browsing, photography, gaming, movies, music and other general computer capabilities.

In the last few years, these advanced and full-featured communication devices have really changed our lives. The way we talk, work, travel and eat, all these things can be now perfectly organized just with a single call made by these new age cellular phones. With the hottest and most innovative technology at your fingertips, you are sure to gather some attention in the crowd. Loaded with brilliant technologies and amazing features, these 21st century handsets are undoubtedly one of the biggest inventions in the history of mankind.

During 90â€™s, we used have Qualcomm QCP-2700 candy bar style phone, which was little bulky and gave a look of walky-talky. As the time changed, with new inventions, more and more companies got involved in manufacturing cellular phones. Brands like Nokia, Samsung, Apple, Sony, LG, HTC, Motorola and BlackBerry are the prominent name that people know about. These companies have offered its consumers with some of the best and advanced handheld phones called Smartphones. Todays, we have a wide series of phones like iPhones, Sony Xperia, Samsung Galaxy, BlackBerry and other more that are instilled with advanced software and runs on latest OS. Are we talking about operating system? Yes, these latest smartphones come with OS just like your PC or laptops. In fact, these operating systems can be upgraded with their latest versions as we do it on our computers. Or we can say that, it is a computer in itself.

Letâ€™s go through the quick review of Samsungâ€™s latest smartphone, Galaxy S III. This phone is an example of human achievement and shows that we have the capability to change our lifestyles with the use of technologies. The latest from Samsung is provided with new version of Android, 4.0 Ice-Cream Sandwich and powered with Quad Core Exynos microprocessor. Based on RM Holdings Cortex A9 technology, you can experience the never before performance with this handset. It also boasts 8MP camera that supports 1080p@30fps HD video recording. Furthermore, its 4.8 inches Super AMOLED capacitive touchscreen help the users to navigate without any lags or hassle through the applications.

Moreover, there are several other smartphones available in the market that you can choose from. Having a Mobile Phone has become a trend and a status at present time. Whether you go to school, college and office or run a business, the carve to have latest handsets will never going to come to end till the time technology keeps providing you with new inventions every day.
