High-Speed Internet Connection Instead of Traditional Phone lines, Telephone by John Peterson

Article published on June 18th 2012 | Communication

If you have a high-speed Internet access for the cable company, chances are you have already applied for a Change in its "traditional" phone service for high-speed Internet, phone plan. My conversations with home and business owners, as requested by many of the same questions. Here are some straight answers:

What is IP?

It stands for Voice Over Internet Protocol. This puts the name of an emerging technology that allows call and receive calls using high-speed Internet dial-up connection rather than traditional phone lines.

You will also hear the terms' high-speed Internet phone, Internet telephony and broadband phone "means the same thing. Whatever you call it, It uses computer technology and software to help people to use a broadband Internet connection as the main way to make and receive telephone calls.

High-speed Internet phone service usually allows you a standard phone number. And I bet you can call that another standard phone number. It does not matter if the other party 'has a high-speed Internet phone service or not.

Make sure you know that you are buying

For example, some high-speed Internet connection services can only call to other users in the same service. How do you want, is a service that will allow you to make your Internet connection tarp calls and all, where you bet, Including the people who use the traditional telephone network.

"How does a high-speed Internet phone service work?

For starters, you have a high-speed Internet connection. You will also need an adapter to convert your current voice into a digital format.

Your phone then hooked up the adapter is connected, directly or through your computer, your high-speed Internet cable modem. You can use either "normal" touchtone phone, which is currently using a standard phone During CMS CMS in consultation with the Internet Protocol (IP) phone, which provides direct access to any building features made possible by the use of VoIP.

Bus adapter Butina when your phone is compatible with packet-switching technology, which are moving online. Packet switching is what makes e-mail, video, audio, etc. The earlier telephone networks "circuit switching" technology.

With packet switching, voice message is broken into small pieces, packages) that travels over the Internet and reassembled at the other marshmallows.

. Recessed High Speed ??Internet Phone Service

I probably do not need to remind homeowners and small business owners, when VoIP is relatively new. It will continue to evolve and improve, as do the federal policy is the State of VoIP and traditional phone service.

As with all legal services, telecommunications, you will need to carefully study and understand all bets VoIP service contract, fine print - before signing a contract to agree to start using high-speed Internet phone service.

"What kind of cost savings can I expect?"

Most high-speed Internet service providers have monthly fees Call service is $ 20 - $ 40 along the river valley. This usually includes unlimited local and long distance minutes. If you are doing a lot of long distance you save a ton of Cash.

"What kind of enhanced telephone features are available?"

Most high-speed Internet phone service providers are offering the most (if not all) are of the same features that you'd expect from a standard phone service providers: Caller ID, Call Waiting, etc. Plus a lot of features that are not standard telephone service, such as voice activated The collection, video conferencing, voice communications in writing, it comes to e-mails and all.
