Article published on May 14th 2012 | Communication

Telephone service, the company uses as a particularly important as the product it offers the business. How many times (unfortunately) you had to make a product that you purchased, or technical support for the company? What about intra-office communication, including having conference calls with the team to another city or country for that matter)? The phone system is more important then you think. That is why it is vitally important to choose a telephone service that best suits your business and its specific needs.

Business telephony world is very large and complex, with hundreds of small and large companies offer very different solutions. You can buy a traditional PBX unit and in-house, to buy an IP PBX and trust your company's data connection to manage calls, or to choose a hosted PBX solution, where the home service provider equipment to another location, you can set up and manage via the web interface features. These drastically different choices, it is important to know the attributes of each to choose one that best complements your business.

Standard PBX units, "go" solution for business phone services, where companies need to set the phone system. PBX is the central hub office phone network, linking together all the phones in the office and the PSTN network. It also allows you to call functions such as dialing an extension to the extension of the range, call transferring and auto-attendants. However, PBXes, are very expensive and must be kept the same office. IT professional, it is necessary to manage and operate, and any changes can be time consuming and complex.

PBXes is the best solution for large enterprises, the labor force, from a central location. These companies can afford the high costs of acquisition and maintenance of the PBX and in the same place as the workers who use the benefit unit.

The existence of VoIP allows greater flexibility and lower cost compared with traditional PBXes. However, their high cost is also prohibited to use them for smaller businesses.

Hosted PBX or Virtual PBX

Hosted PBXes is a new market, but they are the most innovative leveling playing field for small and large businesses. These providers offer much cheaper prices for the same range of functions, allows businesses of all sizes to hire a professional telephone service. Hosted VoIP is based PBXes. This eliminates the separate phone lines in your office, because the data connection is used to make telephone calls. VoIP calls are cheap, and useful features such as voice mail and e-mail. On the other hand, only the IP phones can be used with this service.

Hosted PBX service providers as well as a house and a PBX software to manage themselves. Customers who sign up for service, you can set features such as voicemail boxes and auto attendants via a web interface, no need to go to the PBX itself. This provides unparalleled flexibility, enabling enterprises to increase as needed, without a professional. It also gets rid of headaches, bulky and complex piece of equipment that is of any business, plus!
