SMS Gateway service for cost-effective communication for businesses by Avena Sowell

Article published on February 24th 2012 | Communication

A SMS Gateway company (aggregator) stands between businesses and mobile phone carriers. The service makes it possible for businesses to send text messages in bulk to their customers. The SMS service is one of the most cost-effective tools for speedy transmission of messages and feedback. Your provider will also give SMS software support.

You choose your aggregator depending on the size of the task you wish to accomplish for your business. If you need high volume SMS service, you need to work with an organisation that can deliver sustainable transmission.

The consideration of cost or pricing factors is very important in choosing a plan that returns value for money. However, this too depends on the amount of text messages you send within a specific period as well as your targeted destinations. Some providers will charge more for overseas transmission of text messages. If your customers are within your locality or country, you may wish to subscribe to a destination-based plan since this may be cheapest for your business.

Some SMS service will charge for every single text message you send while others will include monthly fees. If you send many text messages in a month, you may want to avoid being charged heavily for a single text message as this can be very costly for business. On the other hand, a few SMSs a day would do well for business without a flat monthly fee.

It is important to find out any undisclosed charges your SMS gateway provider may impose. Some providers will not tell you everything there is to know about charges such as set up fees. Instead of waiting to find out when it is too late, you may need to research in the internet to know how much your preferred provider will expect from your end every other month or year.

The essentials of a reliable SMS service provider

You may need the services of SMS communication for a variety of reasons including marketing, communication with employees, sending reminders to your debtors etc. Whatever your use may be, you need a service that can sustain effective communication throughout. If your provider lacks capacity for reliable connection, you business loses the advantages of email to SMS communication over traditional email and other conventional approaches.

Make sure you know your provider well enough to determine how reliable their infrastructure is. The provider should be in a position to offer quality service and address technical problems in a manner that does not undermine your ability to communicate effectively.

How many carriers does your provider support? Remember your customers may not be on the same wireless networks and as such you need a gateway service that makes it possible to reach out to all of them, wherever they may be. You should also consider the number of destinations your provider supports. Leading providers support close to 1000 careers and hundreds of destinations.

Your SMS software should be highly intuitive and customisable. This will ensure you can manipulate it to suit your own preferences in the manner you send messages. Always go for the most reasonable rates for the cost of sending text messages via the internet.
