There are many people who still have no idea what VoIP or Internet phone service really is. This article gives you an introduction to VoIP and how it is useful, the traditional fixed-line users.

Internet phone service

VoIP Internet phone or other and then we used to have a landline technology. Stationary uses copper wire technology and analog signals to communicate over the cellular network. Internet phone, but not work with this mechanism. Instead, it uses the Internet to make and receive calls. There is a special protocol called voice over Internet protocol, which makes all of our conversation to the data packets sent over the Internet. VoIP independence from the traditional cellular network, and therefore superior to the use of a telecommunications service. Let us look at five reasons for using VoIP.

Reduce Phone Bills

Call cost a lot of difference. Whether you need to do in calls or international calls. Internet service providers offer very low call rates. Most of the leading VoIP service providers offer a free user to user calls to the network, if you call on the same network number as you have. It saves you a lot of costs for all of your calls. Secondly, the increasing competition among VoIP service providers, international call rates, you can make very cheap international calls. The overall impact of these call rates monthly phone bills are staggering.

Global Access

Fixed-line telephone services are limited options as you can not use them at your home or office. IP telephony service providers, but gives you total independence to use their services anywhere in the world. You just need to connect your VoIP phone with high-speed Internet connection, and you are all set to go. In addition, you do not even need to pay any additional fees to use it elsewhere.

Using VoIP to your mobile phone

Compared to newer technology called Mobile VoIP allows you to use your mobile phone as VoIP. Now you can install your application on your mobile phone and enjoy all the additional function call. You just need to connect your mobile phone to a wireless Internet connection.

Call quality and service reliability

Calls that you can have with VoIP quality is not offered by fixed-line telephone services. Fixed phone uses the old copper and analog signaling technology that can offer clear sound quality. VoIP uses the Internet, which gives you crystal clear sound quality is better than its fixed-line service may at any time be able to offer.

How times have changed. AT & T monopoly was broken up before the old quarter of a century, and the local Bell System telephone companies have become independent. Originally there were seven Baby Bells "and what was left of AT & T handled by coach finally duking with Sprint and MCI competition. Then the Baby Bells started merging and the merger to buy each other. One of them, SBC Communications, bought a significant reduction in AT & T, Cingular gave up their brand they spent a fortune to promote, and once again called AT & T. So what is to come almost full circle.
