Have you ever heard of Internet phone?

If not, get ready to change how you feel about long distance phone calls. You can actually use your internet connection, cheap phone calls to anywhere in the world. Today, we find several Internet service providers around the world who provide this service at little or no cost, and can help you drastically reduce your phone bills.

Over the past decade, we have seen that the Internet and computer technology has changed the way people live, work and communicate. Internet telephony is one such revolution has changed the way people talk to each other.

How does the Internet phone?

Internet phone uses Voice over Internet Protocol (VoIP), which converts the voice signal from your telephone into a digital signal. The digital signal travels over the Internet and converted back to voice at the other end that you can talk to all the regular phone number. VOIP sends voice information in digital form in a separate package, rather than traditional circuit-based protocols to public switched telephone network (PSTN) and helps to use a standard Internet connection, phone calls around the world at a very low or no cost.

To make a call using the Internet Phone?

To make a call using the Internet Phone, you can connect to the Internet phone service. In addition, you need to have a good speed Internet connection. Some Internet phone service allows you to use a regular phone, as long as you connect it to the adapter, while others allow you to make calls from your computer or a special VoIP phone, it is not necessary to provide an additional adapter.

Depending on the service that you have chosen one way call to pick up the phone and dial the number using the adapter that connects to your Internet connection. Another way is to use a microphone, a headset connected to your computer. In this case the number dialed by using the keyboard and is routed through a cable modem.

In fact, the computer need not even be turned on if the phone calls and a special adapter or IP phone. It's just that your Internet connection must be active. You can even use your computer while you are talking by phone.

How to Choose an Internet phone service?

Depending on Internet phone service that you choose, you may be limited to other subscribers, or you can call any phone number worldwide. The call may be local, mobile phone, long distance number, or an international number. You can even use the conference call service, that is, to speak more than one person at a time.

Other Internet phone service providers offer different plans to call. Some service providers offer their services for free, normally only for calls to other subscribers to services. While others charge long distance phone call is not in the field, similar to existing traditional telephone service. A series of other service providers allow you to make calls but not at a flat rate to a fixed number of minutes.

Before choosing an Internet service provider, you should carefully look at his victim, and consistent with your needs.
