A short Comparison between Computers and Laptops by Stuart Owens

Article published on March 30th 2012 | Computer

With the advancement of technology, most of us have started to procure computers at home. Laptops are quite expensive than desktops. Today we find many people have started to us laptops as primary computers. One of the main reasons is that, laptops are easily portable. With the wireless connections that are available, these can be easily carried to any corner of the world and get an access to internet, where networks are available.

Laptops have become very convenient for most business people and travel men. Of course, people have started to use smart phones as well. However, with the help of laptops we can do all that we can on our desktops. This could be one of the reasons why laptops are bringing in a drastic change in the modern world.

One of the differences between computers and laptops can be brought about by way it is manufacture. While we have many good companies manufacturing both these, computers are assembled by many people in recent times. On the other hand, assembling laptops is relatively lesser compared to computers. Few companies that manufacture computers are Dell and Hewlett Packard. There are many other companies as well. Few good companies that manufacture laptops are Dell, Toshiba, and HP-Compaq. Another important factor is that laptops are manufactured standard components, which most computers do not have.

As the demand for laptops and computers are increasing day by day. Computers and laptops used to come with standard colors like black and grey. This gets a cosmetic appearance and customers have started to like these colors. One of the remarkable colors that are now available in the markets currently is Pink.

If we look at the trend in people buying laptops and computers, we find that laptops mainly are mainly used by business people and students. On the other hand computers are used mainly used in corporate, researchers and educational systems as well. However, the concept of buying laptops or computers depends entirely on the usage. However, many people try and get computers as they are lot cheaper. Laptops also have similar demand as they are preferred by young men and women as they are easily portable.

Coming to the entertainment aspect, both computers and laptops can be used to the entertainment. Laptops can be carried along during an excursion and we can play music and watch movies while away from home. While at home, computers have an advantage over the screens, even though laptops also offer large screens. We can connect a desk to huge monitors while gaming. We can experience this while we are playing video games at home. The joy of looking at large screens give more pleasure that those with small screens. Having a service like Xfinity, playing games on High Definition using computers and laptops is a fantastic experience.

Although laptops and computers have disadvantages, these can be over come through simple methods.

â€¢Most of us believe that buying a laptop is quite expensive. This is because we always want to go for the best ones. This entirely depends on the usage. If our usage is only for browsing through the net, then a simple laptop would do and we donâ€™t have to pay much for these simple laptops.

â€¢Instead, we can go ahead with quite expensive desktops. Through these we can watch lot of programs, music videos and movies. We get monitors on high definitions and get you more

excitement.

â€¢Laptops are quite fragile compared to the desktops. They tend to break easily when dropped. Therefore it is always safe to carry a laptop bag. A laptop may get spoilt when we spill something on it as well. Hence do not place a liquid while using your laptop
