# Benefits of iPad 2 Keyboards and Cases by John Smith

Article published on March 15th 2012 | Computer

We all know that all Apple products are expensive and delicate, and even the case of Apple iPad 2 keyboard case is very delicate and expensive. If iPad falls on the ground, it is likely to break. Apple Store will give you a replacement within a year, but unless you buy Apple Care, you're in a bad situation later. And for all types of word processing, unless you are a scientist with a touch screen, you probably have some kind of keyboard. And since there is no support for USB, you should not have Bluetooth. In such case you can use Bluetooth keyboard for iPad. The case for ipad 2 is designed to fit a iPad 2 perfectly, Bluetooth keyboard, can be used for almost any device that supports Bluetooth, including the iPhone, laptops, smart phones, through the built-in 450mAh lithium-ion battery, the keyboard should last about a week without charge. iPad or any other person to use a tablet PC knows a lot of trouble to the virtual keyboard to type. So iPad keyboard can make your typing faster than virtual typing.

It's a netbook keyboard size with hardcore action. The IPAD is used both on one side of the case when the metal around the keyboard is on the other side, working in a similar way to Apple Smart Cover. This is a great protection and a wide range of functions. For those of you, like me, who dreams of turning an iPad 2 to more than just an entertainment machine, a keyboard is absolutely necessary to kill two birds with this stone, is a very attractive option. If you just want to see Netflix all day and play on it Garage Band, so no it is not for you.

When the combination of the ipad case and keyboard in use, it can support, facilitate viewing of the iPad. This makes it like a compact notebook computer / Internet access a lot of work in this computer. This not only makes typing faster, more ergonomic to help reduce back pain. Coupled with the design of the keyboard is silent, allowing the type of people do not interfere with other people.

The keyboard is very high quality. It works perfectly. There are special functions keys on top of the keyboard specially designed for the iPad 2 with all the other keys are placed in their expected place, unlike some other Bluetooth keyboards that has shrunk. It's not perfect, because size does Netbook, but unfortunately, the iPad 2 Netbook screen is pretty good sized so that the two go together. Maybe if Apple made an even bigger screen, one day, the keyboard will grow, but now it's just not possible.

This is the closest you are going to turn your iPhone in two clamshell laptop so by all means, if you're interested in iPad 2 protections and functionality with the keyboard, to go out and buy this. It's worth it.
