Article published on June 27th 2012 | Computer

Software Testing and sap training have their own importance in the IT field. In fact, they are different departments under the core umbrella of Information Technology. Letâ€™s start with some concept sharing process on Software Testing.

software testing is a process of verifying and validating software program before publishing it in the market. There are certain factors that should be kept in mind during the testing phase:

i) It should meet the basic requirements in accordance to design and development phase.

ii) It should function according to proposed planning.

iii) Implementation of the software should take place with similar characteristics.

iv) Finally, it should satisfy the stakeholdersâ€™ needs fully.

The testing phase can be implemented any time within the development process. There are mainly four different type of testing methods available. These are Black Box, White Box, Grey Box, and Visual. Of these four types, Black and White Box methods are considered to be most popular.

Now, let us have a briefing on SAP Training.

SAP is a software tool that is used for creating enterprise resource planning based modules. It is a wide enterprise resource management system that is mainly designed to coordinate information, resources, and activities for completion of several business processes. It is specifically used for billing and order fulfillment purpose. It is also known as SAP R/3. It comprises of 11 modules.

These are listed down below:

FI (Financial Accounting)

FSCM (Financial Supply Chain Management)

CO (Controlling)

MM (Materials Management)

SD (Sales and Distribution)

LE (Logistics Execution)

PP (Production Planning)

QM (Quality Management)

PM (Plant Maintenance)

PS (Project System)

HR (Human Resources)

Each module handles some specific business tasks. However, each has a certain link up with other modules. SAP is mainly based on 3-tier client server architecture with presence of three layers namely presentation, application, and database. Training is provided on each module individually.
