Home CCTV cameras prevent any scoundrel to enter the home as it comes with the alarm system that blows out when any unscrupulous activity happens inside the home. It keeps a close vigil on every moment of the person being walking or staying inside the home. This comes with the aesthetic feature of recording the footage of the area of place where it is being installed for security reasons. These devices incorporate high end hard drives which can store a great amount of footages for future use. It has the capacity to store the footage approx to one year, which can be later reviewed via, net, and TV or cell phone. Are you looking for the reliable security device for your home or office from the unwanted theft or burglary? Then overcome this problem simply by installing good quality CCTV security cameras at the home or work place. The CCTV refers to "closed circuit television" systems that come with the set of small cameras and television set. The increased number of unusual and crime cases across the globe have make these CCTV cameras an ideal accessory for commercial as well as domestic establishments. The installation of the security cameras at home or office helps to lead a peaceful and secure life. The CCTV Security Camera is mainly connected with the internet accessible TV set that offers the constant viewing of the happening prevailing in the home or office place.

With the rapid growth in the technology, CCTVs are now with in the reach of the common man and people are increasingly using this service to protect their homes and offices. The primary advantage offered by the CCTV Security Cameras is that it will keep a watchful eye round the clock, 24*7 a day.

When buying CCTV cameras, it is essential to pay special attention to the digital surveillance system. The CCTV system consists of the camera and its lens, a CCD i.e. Charge Couple Device sensor and a monitor. The image is captured by the CCD and is turned into a signal which is then sent to the monitor, which may be viewed or recorded.

Here are a few tips to be taken while purchasing CCTV security cameras:

1. Location: Will the camera/cameras be placed outdoors or indoors? What will the camera be capturing - the faces of people or larger crowds?
2. Light condition: Is the camera expected to record in low-light conditions or only when light conditions are optimal (as in day time recording). Black and white cameras are ideal for poor light conditions. Color cameras are useful only if light conditions are optimal.
3. What is the expected field of view of the camera? It is necessary to decide on the width of the angle of vision
4. Focal length is another important factor. How far away will the camera be placed from the objects that it is expected to capture?
5. Image Sensors: The image sensors in the camera are responsible for the image clarity and sharpness in the picture. CMOS are less expensive, but CCS cameras generate sharper images, but are comparatively costlier.
