Control your web hosting with a dedicated server by Jack

Article published on May 14th 2012 | Computer

When you have a website you also have a place where the websites is hosted. While the visitors to your website only get to see the frontend of your website it is the backend where the actual work is done. All the backend work is managed by a server. And since most companies today have outsourced their server requirement, their servers are in a remote location and managed by someone else. If you need total control of this server then what you need is a dedicated server. And once you have your dedicated server you can convert it into a user friendly interface with a free cPanel server.

A dedicated server is a physical server that you donâ€™t share with anyone. As a result of this you get much more flexible options than what you get through shared hosting. You have total control over your dedicated server â€“ its hardware, its software and its administration. If you want to run a secure website where there are no interruptions due to network outages a dedicated server is what you need. And once you have your dedicated server in place you can manage your website better with a free cPanel server that is offered by a limited number of websites.

cPanel is a Unix based control panel that is used for web hosting. While a traditional dedicated server will offer you DOS based interaction, a cPanel dedicated server offers a range of automation tools that are presented to you in a graphical format. Any change you need to make on your website you just need to point and click in your hosting platform and the work will be done. API based calls and web interfaces help you perform the most difficult of tasks in regard to your website. When you opt for a free cPanel server you get a 3 tiered structure that provides you multiple functionalities as an administrator, reseller or even as a end user.

Which is the best dedicated server in the world? There are a lot of points that people consider when they think of the best dedicated server. But if you go for the biggest names in computer hardware you can rest assured that your dedicated server will be the best. Companies like HP and Dell are known to make the best dedicated server machines. If you go for one of them and use a free cPanel server you can rest assured that your website will be always up and running with the latest updates incorporated in a jiffy.

When you are thinking about using a dedicated server and a free cPanel server what you need to consider is the quality of the provider. There are many server hosting services in the US and some of them are really more than worth their money. These hosts provide you a range of packages that you can choose for your dedicated server and a free cPanel server. Get to know some of the best hosts in the country and choose the services of one of them.
