Data Extraction Made Easy by [Newprosoft](#)

Article published on December 6th 2011 | [Computer](#)

It can be quite tricky when you want to extract data from web, and especially if you have to rely on the traditional copying and pasting technique. However, technology has improved in appreciable leaps and bounds and it is now possible to obtain desired web data in a much easier way. The process of data extraction has now been automated in such a way that extracted data can be saved in various desired formats. Data can now be extracted from a particular website/s, and with the touch of a button it can be transferred automatically to a desired location. Indeed, extracting data from web in large amounts is no longer the hassle it used to be.

Data scraping is yet another process which has been made much easier. You however need to have a content extractor which is both easy to use and powerful enough. The ideal web extractor should be very friendly to the user and will preferably have a wizard-driven interface. Such an interface will make it easy for you to go through the entire process of building your pattern, further making it easy to extract data from website. You can also come up with your own rules easily by just pointing and clicking, and you won't need any string of codes – two conveniences which are totally worth your money.

Extracting data from web has lots of benefits for many users. For example, if you need information about so many products in a catalogue in a particular site, you do not need to have an extraordinarily long working day. All you need to do is create your own project in the web extractor and all the information you need will be extracted automatically from the site without any interference from you. This will definitely save you a lot of energy and cut down on browsing hours.

When you create a project to extract data from website, you are able to get data from other websites which have pages of similar structure. The data you have extracted can then be transferred in a wide variety of formats like TXT, XML, and MySQL etc. With the vast variety of formats at your disposal you can easily be able to process the extracted data and do its analysis in a way that is most convenient for you. The configuration wizard will give you very simple steps which you should follow so as to download all the information you need from the web in a completely automatic and stress-free manner.
