Pondering as which security software to install on your system? In fact the question holds the gravity. No doubt todayâ€™s products are not just the standalone antivirus but a complete suite. Firewall, antivirus, antispyware, antispam protection, protection against dodgy links in search engines, and identity theft protection are a few components to name when it comes to their anatomy. As of now, all leading security vendors have played their cards for 2012 security suites, so it would be the best time to compare their products in terms of protective, repair and usability features.

Letâ€™s have an antivirus review to know what will work on a Windows-based PC the best. There are many leading software testing firms and tech media portals which screw up the products on above mentioned parameters. Go through the top 3 security products of 2012.

Kaspersky Internet Security 2012

Quick to install, updated, execute and easy to get customized security solution that boasts to incorporate acute antivirus, spam protection, firewall, applications control, network defense and network monitoring. Its gaming profile and virtual keyboard are other features that will pay off your trust. The product is smart to clear off any conflicting security programs that were already on your machine. It actually finds remnants of an old installation of a competing product to ensure error-free installation processing. The interface is so simple that it can be easily apprehended by a layman. AV-test.org assigns 6 out of 6 in protection, 6/6 in repair and 5/6 in usability in a recently concluded test last year (Nov-Dec).

BitDefender Internet Security 2012

The installation is bit slow but overall action plan that it executes can justify that. The setup files judges the system compatibility, presence of any outdated software and clears off viruses and malware as a part of process. You can also copy the installation package from the installation disc to a USB storage device, to get it installed on a netbook or notebook that are deprived of optical drive. Bitdefender gets its update right from the cloud and implements virtualized behavior-based detection. Features like Active Virus Control, Rescue Mode, Virtualized Browser, Vulnerability Scanner, Antispam, Two-way Firewall, Parental Control and Autopilot add feathers to its cap. AV-test.org assigns 6 out of 6 in protection, 5/6 in repair and 4.5/6 in usability in a recently concluded test last year (Nov-Dec).

AVG Internet Security 2012

Installation and setup of AVG is quick and easy. Just after downloading the small installer file, double click on the file and then within a couple of minutes it will reach the â€œFinishâ€• point. This latest offering from AVG incorporates antivirus, firewall, anti-spam protection, Link scanner, Anti-rootkit protection, System Tools, ID protection and many more. AV-test.org assigns 5 out of 4.5 in protection, 5/6 in repair and 4.5/6 in usability in a recently concluded test last year (Nov-Dec).

At times, you may experience problems with your antivirus product. It can go wild and create problems for the email, browser, instant messenger, and web-based applications. Usually, the products are available with easy setup but issues related to the installation, activation, update and upgrade canâ€™t be denied. Needless to worry, as antivirus support services are available on-demand over the Internet. Let experts fix related issues remotely through remote-screen sharing. In case of

Internet failure, follow the troubleshooting steps as instructed by experts.
