Article published on April 20th 2012 | Computer

It is commonly said that people show great interest in knowing the crucial aspects of projector screen. Similarly, they appear too much interested in detecting the pros and cons so that it can help them in arriving at logical conclusion about its suitability to their needs. Experts believe, practising this kind of a systematic procedure is highly appreciable as it can save you from falling into troubled water in the long run.

According to one recently concluded survey, compared to the electric projector screen, the fixed variety suffers from the bottleneck of being fixed on the wall. However, if you wish to derive the best results in terms of clearest and most crisp images, paying appropriate head to certain areas is noteworthy.

For instance, when it comes to create best impact on mind of viewers, the size of projector screens holds a special importance. Likewise, it is the viewing angle that plays a dominant role on comfort and convenience of the viewing audiences. One measure to get the best results is to determine the distance between viewers and screenâ€™s surface.

Experts in the field of projector screens are of the view that choosing an angle comprising of 30 degrees distance between the right and left screen is the ideal practice. In fact this is one of the parameters that can give assured comfort and convenience to the viewing audiences.

Another factor is the use of screen materials. This will go a long way in assuring receipt of crisper images. Presently, the market is flooded with numerous varieties of LCD and DLP types. Greater availability of options and types has benefitted the normal buyers. They can buy their peace of mind by selecting a model that suits their parameters the most. The amount of reflectivity is largely determined by the level of the screen gain. More the gain, greater is the reflectivity. For instance, higher screen gain is more likely to show lighter colour.
