OpenPro™'s Open Source Software: Pragmatic and Effective Makes it Optimal Business Solution by [1300golimo](#)

Article published on February 8th 2012 | [Computer](#)

Open source software is the proven effective and practical business solution and OpenPro has the business software that delivers the needed performance at often half the cost of standard branded software. Both the initial purchase price and the ongoing maintenance expense can cost significantly less than that of Windows-based ERP software solutions since OpenPro is built using open source technology. With a broader range of functionality and versatility, OpenPro has subsequently the fastest return on investment rate in the industry.

OpenPro's Open Source software enables it to use an open architecture technology, which allows it to penetrate all existing software markets. The software can run on any operating system including Linux; Windows; UNIX®; and Mac; as well as on IBM AS400 I and Z series mainframes and minis; HP minis and Sun minis; and it can use any SQL database. OpenPro Open Source software uses LAMP open source technology which is a robust and well accepted open source standard. OpenPro, which is fully Web-based, uses a rules-based engine that provides the flexibility to support many different industries. It is written in PHP, an open source that is a highly customizable application with Open Pro making the source code available to customers. Customers may purchase the software, bring it in-house or have it hosted ASP, Cloud Base, On-Demand or as a Software As A Service (SAAS) solution.

Since 1998 OpenPro have been delivering Web-based ERP software solutions to small and mid-sized companies and international enterprises. OpenPro is a leader in licensed Open Source software with the most extensive experience of any web based application in the world. OpenPro has two ERP products, Easy ERP and OpenPro Enterprise. Easy ERP is designed for companies with 20 users or less that are seeking prepackaged application modules and a limited number of database types. OpenPro Enterprise is designed for larger companies with more than 20 users; it offers more options of database, operating systems and functional components. As a provider of Open Source software, OpenPro excels in providing a full suite of applications within six modules: distribution, financials, manufacturing, customer relation management, e-commerce and systems. With over 200 worldwide locations, OpenPro had been a well recognized industry pioneer and leader with complete Open Source Software Solutions to meet the various requirements of most industries.

OpenPro™'s nimble size gives it the competitive advantage that allows it to be flexible in incorporating new functions, technologies and changes sooner than industry standards. OpenPro will often incorporate new customer requirements prior to the system's purchase. OpenPro has offices around the world and it also has over 75 distributors worldwide for both US and international sites. OpenPro, Inc. USA head office is at 10061 Talbert Ave #200, Fountain Valley, CA 92708 USA with Telephone 714-378-4600 and Fax 714-964-1491. The client can email infoop@openpro.com. For the closest location and ask questions through an on-line form or chat on-line. The client interested in OpenPro™'s open source software can visit: [openpro](#).
