Videos are always been very important for people who love to watch movies, songs, documentaries and TV shows. Internet is the best source of getting the videos of your interest. These videos may contain your favorite contents like tutorials, movies and TV shows. There are a numbers of the websites that provide users huge collection of videos. These videos are in different video formats because these videos are shared by different platforms users. There are numbers of the formats that are used to encapsulate the videos in digital format. These videos can be played by distinguished media player apps.

Websites like YouTube provide videos in FLV, MP4 and WMV while there are also thousands of the websites that are used to provide videos in multiple formats like MKV, AVI, MPEG and MOV.

There are multiple formatted videos stored on your computer hard disk. Videos contained in different formats cannot be played on the single media player application. If you are a Mac user and you need to play your all videos in QuickTime media player, this app can render a few formats of videos and most of the other videos cannot be played. In this situation where your favorite or required videos are in unplayable format by the media player, you must go for the alternatives. There are two possible solutions for this problem:

1- You can install a media player application that can recognize and play the videos for you, but there is a limitation exists in this solution. This media player application will not be able to play all these media files.

2- You can convert all the videos to a playable format that can be played by a single application.

The solution of converting the videos is the most appropriate and effective in playing unsupported videos. You can use a convertor tool to convert distinct video formats to a unanimous format so that these all videos can easily be played using single applications. There are a number of tools or apps available to convert the videos. ISKYSOFT videos converter tool is the best application for this purpose. It is a featured tool with numbers of the utilities that make users able to complete their tasks effectively.
