Remove McAfee and Raze Software Conflicts by [Neha](#)

Article published on March 14th 2012 | [Computer](#)

Over the years McAfee has retained the supremacy in terms of computer security. It touts solution for home and business both. Let's take into account the AV-test.org feedback regarding the latest security suite from McAfee. It is strictly based on the test conducted by the independent IT institute in the month of November/December, 2011, where the product was subjected to different samples of malware attacks, inclusive of web and e-mail threats. The lab took into account the protection, blocking and removal of malware, system repair, user-interface, system impact and false-positive detection rate while allotting the certificate of merit. For home consumer it picked McAfee Total Protection. There is a sigh of relief for McAfee as the product crossed the industry average in terms of protection, blocking and false blockings of certain actions during download, installation and use of legitimate software. However, the result is not satisfactory while considering the repair, removal and the system resource consumption, as the respective figures dropped below the industry average, and out of total 6 points it could rip only 3 points. The test was conducted on a Windows 7 based machine. Above all, the product was declared as "qualified". Likewise, AV-Comparatives.org puts McAfee Anti-Virus 2012 protection in "advanced" range. If you are interested in getting the one suitable for your computer, it's recommended to acquaint with McAfee review available from reliable tech media or tech support portals.

Install McAfee, but don't ignore the system compatibility and have a check through the Control Panel to make sure it doesn't house any outdated security product. Installation is pretty simple, where you have to just download and run the setup, and accept "terms and conditions" and enter the product activation key, nothing special to be discussed here. Nonetheless, if you are not lucky to successfully install or activate the product, blame it to your bad luck. But don't get disappointed as McAfee Support is just a call away. The moment you are connected with the helpdesk, experts will take the onus of the related issues and will reinstall, update and configure the software to let you sail smooth. Experts can also update and upgrade browser, email application, instant messenger, social network, etc. as per demand to secure the gateway of communication and collaboration. They can also amend settings of attached router device, if required so that files, programs, music, videos, images, peripherals and other network resources are available at your behest.

Still considering being on the thin side of the wedge? Wake up, uninstall McAfee from the system, check for the presence of any malware infection using any online removal tool, and restore the software back. Don't use any third-party uninstaller tool unless it's must. Removal could prove help in recovering from any product related issues. Remember, technology is meant to serve you, and should not be the vise-versa. Do it yourself with the help of McAfee Support knowledgebase and video tutorials, if comfortable, else give a chance to experts through the secure Internet connection. With updated protection, you can bounce back and enjoy computing to the fullest.
