The continuous ink supply system - what you need to know

by Julia Bennet

Article published on March 28th 2012 | Computer

The modern bulk inking systems ensure that print quality is never compromised. You may have experienced how print quality goes down drastically as the ink in the inkjet cartridge is exhausted. You are then left with no other option but to buy another cartridge. But now you can switch to the continuous ink supply system and you will need no more cartridges.

Bulk ink systems are very easy to use. Think of such a system as a reservoir of ink. The reservoir is attached to the printer and it just sits there doing its job. The moment someone gives the print command on their computer the reservoir is pressed into action. Instead of the cartridge supplying the ink for the printing job it is the reservoir that supplies the ink. Since the continuous ink supply system contains large amounts of ink there is no need for you to change the cartridge. So even when you have no more cartridges there is no need for you to panic. You have the continuous ink supply system to ensure that there is no stoppage in printing.

If you calculate the amount you pay for inkjet printers you will be shocked. Printer manufacturers always recommend that you use their OEM cartridges or specified cartridges. They constantly remind you that a low quality cartridge can damage the printer and reduce its lifetime. Hence, you have no other option but to buy expensive cartridges. Calculation says that a gallon of OEM printer ink costs upward of $3,000. With the continuous ink supply system this cost can be reduced by up to 95%. Hence, it is a boon in disguise for you when you have no more cartridges.

There is another huge advantage of the continuous ink supply system. It is environment friendly. When you are through using an inkjet cartridge you tend to throw it away. This causes pollution because inkjet cartridges are made of plastic. When you switch to the continuous ink supply system you need no more cartridges and hence you contribute toward a greener world by reducing the use of plastic.

Choosing your continuous ink supply system manufacturer could be a task if you don't know anything about this industry. Hence, you should spend some time online before you switch to this system. After researching some of the manufacturers you will be able to shortlist a few of them. And further research on cost and ink quality will tell you that the best name in the continuous ink supply system is InkLink.

InkLink has been manufacturing the continuous ink supply system for years and it has helped hundreds of its customers to move to the concept of "no more cartridges". The ink quality from InkLink is the best in the world. InkLink has a robust R&D team that continuously improves its continuous ink supply system. When you buy the bulk ink system from InkLink you can rest assured that there will be no compromise in quality.

Switch to the continuous ink supply system from InkLink today and you will need no more cartridges.
