Another great use of LED in our lives, now artists are using it to create stunning artwork â€“ LED Painting by Dominic Longpre

Article published on May 26th 2012 | Customer Service

Have you ever heard a tool that can write in the air without the paper or other medium? Is it amazing if someone creates such a tool that helps you to draw freely in the air? Well it is available for some artists now. Aissa Logerot, a France designer, made this happen. He is giving graffiti artists the chance to use LED light and photography instead of aerosol and paint. His Halo looks like a spray can, but instead of paint is filled with an LED light.

You may wonder how does it work and what are the features. We had a research of lighting painting and got the results below.

History of Lighting Painting

Before Aissa Logerot, there are records of the lighting painting photography. It can be traced back to the year 1914 when Frank Gilbreth, along with his wife Lillian Moller Gilbreth, used small lights and the open shutter of a camera to track the motion of manufacturing and clerical workers. Man Ray, in his 1935 series "Space Writing," was the first known art photographer to use the technique. However until Aissa Logerot created this light spray can, the lighting painting start becoming popular.

Theory of Lighting Painting

As one of the most popular photography art, LED Light Painting use cell photos, flashlights or other lighting objects as the tool to create pictures or words in front of long-time exposing camera. The unique gesture of the artist also be shown while painting.

Features of â€œHaloâ€•

The LED painting can created by Aissa Logerot can change colors and brightness on the fly to achieve the specific lighting effect. Different colors of sprayers available for changing the colors. Different stress that you push the sprayer can change the brightness and width of the light. Whatâ€™s more it is powered by an internal battery that can be charged by shaking of the can, which means itâ€™s almost eternal for using. Compared with other aerosol paints, this kind of LED lighting painting has no harmful chemicals at all!! Isnâ€™t it amazing?

This kind of LED painting Cans create really awesome visuals if the light and photography are used correctly. Look at the following photos that taken from LED spray painting. You will definitely say WOW if you were there.

After reading this article, you may have another questionâ€• where can I buy it?â€• Well, this kind of LED painting cans is not available in the market now but sure in the future you can buy one and paint your dreams in the darkness.

LED lights not only can create the painting artistsâ€™ dreams but also create your future lighting dreams! Join us in the LED world and start to change the world right here, right now!
