# Upgrade Your View with 3D Blue Ray DVD Player by Mark Husen

Article published on July 26th 2012 | Customer Service

The growth of technology knows no end. With each year we have the latest technology or an upgraded version of the existing technology. Comfort, convenience and utmost satisfaction is given to consumers. Gone are the days when having a television set was a bonus. Today customers are seeking comfort vision like pictures in high definition and absolute clarity of sound. With HD television sets selling like hot cakes, the best available option now to watch HD video content is the 3D Blue Ray Dvd Player. This is the latest technology present in the market, ready to amaze you with its outstanding features.

## About Blu Ray

This is a HD technology in an optical disc format used for computers and movie players. The blue ray disc is the size of a standard DVD or CD but holds over 5 times the amount of data. The technology is such that more bits are read from the disc. Your home theatre comes alive with a Blu Ray 3D Dvd player. Most films today, especially animated ones are made and available in this format. It has a shorter wavelength as compared to technology used in regular DVD players. It can hold an entire film at high definition and you can record 2 hours of video content. This technology has got its support from top technology brands on both the hardware and software side.

## Features

Blu Ray 3D Dvd player perfectly matches a high definition TV and can convert your home into an entertainment center for music, movies and photos. These players use video compression and blue laser technology. This gives you HD video on the same sized disc as a regular Dvd player. With the best Blu Ray disc player you can enjoy the wonders of 3D at home. The technology helps you view picture in depth and movements a reality, leaving you completely immersed. Whatâ€™s more! You can connect your TV with portable blu-ray disc through any wireless connection. It also relieves you of the annoying loading time taken on standard players. With the wireless sync on your PC or mobile phone, you can enjoy movies, music, photos or videos on the TV screen.

## Benefits

This is the best format available in terms of sound and picture quality. Moreover, it has the capacity to store more information, giving you the liberty to see more. Animation, action or any other film sound and look great in blu-ray technology. This extension of 3D cinema experience is available in different brands. It is necessary to browse for reviews before picking the best 3D Blu Ray Player. Most importantly you need to have a HDTV to complement this technology. Itâ€™s slightly more expensive than regular players but worth the features you get to enjoy.
