Article published on February 14th 2012 | Customer Service

Washing machine is a wonderful appliance which is used daily in everyone home for washing clothes. As it is used daily, so need to pay special care on its repairing. This home appliance has variety of expected life spans and after a particular period it needs to repair for further use. There are several repairing companies available in the market today which easily meet your need. If you are staying in Washington DC and looking for washer repair companies then itâ€™s not a hard task to do. They offer very fast service at very competitive price.

The Washer repair Washington DC companies offer lot of things to consider, including the age of the appliance and what the household budget will allow. There are several situations when you find the need of repairing your washer.

Spinning or Agitating Troubles

You need to call a repair company in Washington DC if your washing machines agitator won't work. Compared to other parts of the washing machine, agitators are comparatively easier to fix. If the drive belt becomes loose, it create Washing machine to malfunction. If the belt drive is really damaged, then need to buy a new one.

Leakage problem

If your washing machine is having any leakage then itâ€™s possible that the leak might come from the hose. You need to solve this problem monitoring the hoses regularly and tightening it out with the regular interval of time.

Snags or Rips problem

This problem mostly comes from the tub or agitator. Some washers tub is made up of plastic and its materials is fairly rust resistance. Unfortunately, the holes in these tubs could rust. You need to fix this up with sandpaper.

Replacing the Agitator

It is good to replace your agitator if it is broken or not working properly. Delaying in doing it could destroy your clothes.

Some cleaning and maintenance tips for your clothes washers:

ïƒ˜ Check if grime and dirt have started to build up along the interior walls. If so, then itâ€™s the time for some clothes washer cleaning.

ïƒ˜ Pour in hot water along with two cups of lemon juice and vinegar to loosen up some of the things that get stuck on the surface (ex. dirt, grime, dried up soap).

ïƒ˜ Spray some bleach dispenser, and then scrub with some Q-tips and paper towels.

ïƒ˜ Properly check the hoses for leaks. If it is leaking then its good idea to replace with new one.

If you really need to replace your washer then contacting the company which from you bought your

machine is a best idea to save money and time. Moreover, their work is very much guaranteed.
