For Data Recovery St Louis Relies on Secure Data Recovery Services by Donald Marshall

Article published on February 7th 2012 | Data Recovery

When it comes to data recovery, St Louis business owners and personal computer owners often seek assistance from Secure Data Recovery Services. The reason for this is simple: this company provides the outstanding service that business owners and personal computer users need and deserve.

It is unfortunate, but when it comes to Data Recovery St Louis computer users know the danger is real. Every year, thousands of computers experience a variety of problems that can affect their data. Viruses, crashed hard drives and file corruption are just a few of the many issues that computer users face. When these issues occur, fast and reliable service is often required in order to retrieve crucial information. In general, when hard drives or other digital media fail, computer files can become completely inaccessible, and these losses can cost computer users thousands of dollars and in some cases the loss can mean the difference in staying in business and losing a business.

As mentioned above, when it comes to data recovery, St Louis often relies on Secure Data Recovery Services. The company provides safe and reliable data recovery for all types of media including hard drives, RAID arrays, flash media, smart phones, SAN, NAS and optical media. Their professional engineers perform their tasks in a clean room which prevents contamination and they use a wide variety of secure techniques to recover files and folders that have been lost or damaged. The amount of data that they can recover is virtually unlimited. Generally, most cases are completed within 2-5 business days. The company also offers emergency services for time-sensitive cases.

It is worth noting that the date recovery St Louis facility provides SSAE 16 certified data recovery services for computer users and businesses on both sides of the Mississippi river. Their services are independently audited to meet many of the most popular IT security standards. This cannot be said by many other data recovery services in the area. Their SAS 70 certification is proof of their dedication to superior access controls. They are particularly proud to announce that they are currently the only data recovery company in the world to earn the new SSAE 16 certification.

Secure Date Recovery Services is also certified to meet various compliance requirements. This makes it easy for hospitals, e-commerce business and government offices to use their services. In addition, Secure Data Recovery Services is annually audited to meet the privacy requirements of HIPAA, PCI and FERPA. The company is also a certified GSA contractor.

As mentioned above, when it comes to safe and reliable data recovery St Louis relies on Secure Data Recovery Services. This is the one company in the local area that has all of the policies, procedures and technology to get fast results. They are available for consultation and a visit to their website will provide visitors with detailed information concerning their services as well as contact information. They also offer a no-risk diagnostic service which allows customers to know beforehand what the problem is and how long it will take to correct.
