Transformation of Mkv to Dvd with No Lost Subtitle by Willam Scot

Article published on December 16th 2011 | Data Recovery

The process of converting mkv to dvd is intricate. If you want to convert the mkv files to dvd, you should know first how to do it. When you know the process, you can easily follow the steps and turn the mkv files to dvd. Here is a short description how to follow the steps smoothly and convert the files without any obstruction. For converting the mkv files, you need to download the mkv files to avi files with subtitles. You need to install and then run the same files on your system. Next after it, click on the open video button, and select any particular mkv file. Now, click on the options button for configuring the output options. Next after it, you would require to click on the convert button to output the video file.

Perhaps, a short description would not suffice when you want to know how to convert mkv to dvd. Well, before launching the program, you should install the mkv codec if you wish to convert the mkv files to avi files with subtitle both. Here, the options dialogue box is used to select the options of the output clip. Well, if you want to convert it without the subtitle, you should select a video compressor as well as an audio compressor. In contrast, you should install the mkv codec pack before launching the program.

If you want to watch the converted avi files on the dvd format, or other portable devices, you can try the mpeg layer-3 audio compressor. However, not all computers adhere by the instruction easily. It could be more problematic of the windows was made in 1997. The computer would run it perfectly if the Fraunhofer Radium mp3 codec is installed in the system. While you try to use an mkv to dvd converter, few video compressors have not the settings dialogue box. Try to follow the steps by selecting the Windows menu startâ†'programsâ†'combined community codec packâ†'filtersâ†'fdshow vfw c coniguratuonâ†'ffdshow vfw configuration.

If you want to later the size of the output file, you should set the bitrates (kbps) in the ffdshow video encoder configuration dialogue box. The encoding bitrates are larger, the picture is also clearer, although the output file is generally larger too. After you open a video file, you would find two icons at the right side of the bottom of windows desktop. The icons are Haali Media Splitter and DirectVobsub. When you want to convert mkv to dvd, right click the Haali media splitter icon, to change an audio stream or subtitle. Next, right click on the directvobsub icon when you want to change an audio stream or subtitle, or configure a video or audio decoder.

If the mkv file has subtitle, you can convert without the subtitles. For this, you need to disable the function auto-loading in vsfilter. To perform this, select, startâ†'programsâ†'combined community codec packâ†'vsfilter configurationâ†'generalâ†'loadingâ†'do not load. Generally, the default function is load when required. Finally, click the convert button to start the conversion process. While the process, do not change the audio stream or the subtitle.
