Article published on December 8th 2011 | Diabetes

Diabetes mellitus, commonly known as diabetes, is one of the worldâ€™s oldest known diseases. A recent news report cites that "researchers at the Atlanta-based Centers for Disease Control and Prevention (CDC) said the prevalence of diagnosed diabetes in the U.S. rose rapidly across all regions, demographic groups and in almost every state during the past decade. Diabetes is the nationâ€™s seventh leading cause of death, accounting for more than 300,000 premature deaths every year, the CDC said. About 800,000 new diabetes cases are diagnosed annually".

Diabetes mellitus is caused either by a lack of the hormone insulin (Type I diabetes) or the body's inability to use insulin (Type II diabetes also known as maturity-onset diabetes). Type II diabetes is often triggered by obesity, stress and a sedentary lifestyle. The CDC attributes the phenomenal increase in diabetes cases to the growing prevalence of obesity and decline in physical activity.

>>Increase in diabetes cases between 1990 - 1998 was 33%

>>For people between 30-39 years of age the increase was 70%

>>For people between 40-49 years of age the increase was 40%

Saleem - About Author:

Chemical Composition:

The active constituents of Vijaysar are Polyphenolic Compounds which significantly lowers the blood glucose level of hyperglycemic. The effects are due to an increase in insulin secretion and its impaired glycogen synthesis in the liver secondary to diabetes. Vijaysar modulates tissue glucose utilization in insulin-dependent tissues and could serve as one possible mechanism of its antidiabetic activity. slow the development, progression and severity of cataract, a common complication of chronic diabetes. Vijaysar helps to reduce the glucose absorption from the gastrointestinal tract and improve insulin and pro-insulin levels. Vijaysar is effective in beta cell regeneration and has also been found to have a hypocholesteremic effect.
