Boise Career Profile : Surgical Technology by William Hauselberg

Article published on February 7th 2012 | Education

About Surgical Technology

Surgical Technology is a fascinating field where individuals work under the supervision of surgeons and another medical personnel while assisting with surgical operations. Surgical Technology graduates are vital members of operating room teams which are comprised of surgeons, nurses, and anesthesiologists. Prior to an operation or surgical procedure, the Surgical Technology graduates are tasked with preparing the operating room.

Surgical technology professionals have the responsibility of setting up the surgical instruments, equipment and required sterile solutions. Those who work in the field of surgical technology may also have the responsibility of preparing patients for surgery by shaving, washing or disinfecting the incision site. It may also be the responsibility of the surgical technology graduate to transport the patient to the operating room and assist in placing the patient on the operating table.

Surgical technology graduates are one of the major components of the surgical preparation process. Boise residents interested in working in this field of surgical technology must be prepared to stand for extended periods of time and remain alert during operations and surgical procedures. At times, the surgical technology graduates may be exposed to unpleasant sites, materials and communicable diseases in the operating room. In most cases the surgical technology graduates will work a regular 40 hour week; however, some positions require work at night, weekends or holidays.

Training and Education in Surgical Technology

For those interested in working as a surgical technology, Boise is a great place to train for the career. Typical training programs can be completed in 9 to 24 months. After completing the program, individuals are awarded a certificate, diploma, or associateâ€™s degree. In order to prepare for a career in surgical technology, students will take courses in health, chemistry, biology, physiology, anatomy, pharmacology and medical terminology.

After Training

Surgical technology graduates are non-licensed, but individual hospitals, surgery centers and healthcare provider networks may have their own standards for hiring. Apprenticeships and on the job training may be offered before a recent graduate is entrusted to the operating room on their own.

Wherever your allied health career takes you, the operating room is an exciting place to work, and surgical technology graduates in Boise help to make a difference in the lives of the patients who pass through their operating rooms.
