California Students Consider Welding School by William Hauselberg

Article published on March 7th 2012 | Education

If you are a California student considering becoming a welder, or simply wish to learn advanced welding skills for your own shop or work, enrolling in welding school is a wise chose. You have a number of excellent options near California to receive a welding certificate and obtain a job with your degree and expertise. Whether you are interested in shielded metal arc welding or gas tungsten arc welding, you will find courses and certificate programs to suit your needs. You can earn a welding metallurgy and inspection certificate, including ultrasonic testing applied to welded materials. You can also learn how to repair welding equipment and interpret blueprints.

Attending Welding School

If you are considering a California structural welder school, these educational centers offer welding classes of all kinds, including structural welding courses. In addition to the many schools that offer individual courses, numerous schools offer certificates in welding technology. These programs are typically accredited by the American Welding Society (AWS) or by the American Society of Mechanical Engineers. Thus, an education in one of these programs can qualify you for many opportunities to work across the country or overseas.

The amount of time it will take to receive a certificate in welding technology will depend on the type of welding that you will study as well as the nature of the coursework. A California structural welder school will often have training programs and courses available at night as well as offering the typical day-time courses. These programs will allow you the most flexibility; you can pursue a certificate in welding even while working another job.

A Welding Career

One of the primary advantages of an educational certificate or coursework in welding is, of course, the availability of welding jobs. Skilled welders are always in demand -- from work in routine or custom fabricating building structures to oilfield and pipeline work or customizing cars. When discussion turns to the job market in America, a constant theme is the lack of skilled workers who can actually fill the openings in manufacturing, oil refining and metal fabrication. While the number of job openings varies on a yearly basis and geographically, welders are always needed to run the American economy. And for those inclined toward travel and adventure, welders educated in California will have the opportunity to work abroad.
