# Chicago Students Choose an Information Technology Certificate

by William Hauselberg

Article published on March 16th 2012 | Education

Careers in the field of Information Technology are experiencing tremendous growth. Computers and technology are essential in just about every industry imaginable, and where there is technology, there is a need for highly qualified IT staff. IT professionals are an integral part of the workforce, and as technology continues to evolve, individuals with an IT background will remain in demand.

If you wish to begin a career as an IT professional in Chicago information technology diploma programs in the area offer specialized career training and certification for those who wish to enter this ever-expanding field.

But what are the benefits of choosing to pursue an Information Technology certificate versus a four-year diploma? For starters, a certification program can be completed at a fraction of the time and cost it takes to obtain a diploma. The coursework required in a certification program focuses on the specific skills and knowledge you need to be successful in the IT field, whereas a four-year program also requires a number of general education courses that do not necessarily relate to your chosen career path. In a traditional four-year program, students essentially learn a little about a lot, and the skills they acquire are rather broad.

Through an IT certification program, students can specialize in a number of areas to become experts in different aspects of Information Technology. Students can obtain certifications in CompTIA A+, CompTIA Network+, Microsoft, and Microsoft Systems Administration. This specialized training can help you market yourself as not only a professional, but someone with the knowledge and expertise it takes to get the job done.

Upon completion of your certification program, Career Services staff will work with you to help prepare you for your new profession. Career Services will help you perfect your resume and cover letter in order to highlight your skills and qualifications in order to set yourself apart from other candidates and land interviews. They will also help you prepare for the interview process in order to present yourself as the ideal candidate for your desired position.

With an IT certificate, you can find jobs as a PC Technician, Help Desk Specialist, Technical Specialist, LAN Administration, Desktop Specialist, Systems Administrator, and Network Administrator.

If you are a student or potential student living in Chicago information technology certificates from a licensed, accredited institution can put you on the fast track to success in the IT field.
