Job Responsibilities of Optometric CE by Julia Roger

Article published on December 15th 2011 | Education

The practitioners of optometric ce are known as optometrists and are important part of our society today. . Their area of expertise involves thorough testing of all sorts of minor as well as major eye sight related problems such as eye coordination, focus, near sightedness, far sightedness, color perception and depth. The remedies include glasses, contact lenses, vision therapies and minor rehabilitations if necessary. Apart from this, they also treat serious problems like glaucoma, diabetes and others. If necessary, they prescribe eye drops and medicines for treating vision related problems and eye ailments as well.

The experts specialized in this domain are medical graduates who have pursued a full time general course in optometry. The duration of the course ranges from three to four years from place to place. However, getting a specialized post graduation course is desirable for candidates willing to specialize in this sector. There are several such professional courses that can be pursued after the completion of the full time general curriculum.

The professional courses are further beneficial in the sense that even students who may not have pursued the regular course can take a professional course in correspondence and on successful completion of the course, get a medical license to practice freely within the country of residence. However, the candidate needs to be a science graduate with mathematics as a compulsory subject.

In addition to this, every applicant seeking admission in an institute offering optometric continuing education is required to appear for a common entrance test, passing which is an absolute necessity to pursue such courses. The course is a combination of theory well combined with thorough practical exposure to provide the students with some much needed real time experience.
