Main Programs Offered by Chicago Colleges and Universities by William Hauselberg

Article published on August 4th 2012 | Education

Residents of Chicago have the opportunity to earn a degree or certificate through high-quality education programs offered by various Chicago colleges and universities. Degree programs and admission requirements may vary depending on the type of school. Chicago residents can attend college to earn a degree or certificate of their choice while remaining close to family and friends.

Nursing Schools

Some of the main programs that are offered include degrees in business and the healthcare industry. Nursing is a popular career among individuals who want to enter into the medical field without attending medical school. The nursing schools in Chicago offer a comprehensive curriculum to prepare students for a career in various areas of nursing. Some of the courses that nursing students can expect to study include:

â€¢ Anatomy

â€¢ Physiology

â€¢ Fundamentals of Nursing

â€¢ Ethics

â€¢ Human Development

â€¢ Introduction to Psychology and Sociology

â€¢ Infection Control Procedures

Nursing schools in Chicago also give students the chance to earn hands-on experience in a clinical setting while completing coursework in the classroom. More advanced classes in nursing can prepare students for experiences that may be encountered during nursing such as emergency situations like natural disasters or grieving. Appropriate nursing procedures for these and other types of situations are covered throughout the program. Students have the option to earn an associateâ€™s degree or a more advanced degree in nursing. They can also acquire a two-year degree in nursing to work as a licensed practical nurse (LPN) while continuing to pursue an advanced degree.

Earning a Degree in Business

Business degrees allow students to acquire the knowledge to work in various types of industries. Individuals with a business degree can work in areas such as human resources and finance. The first two years of business school will require students to complete the general education requirements that are necessary for graduation. These earlier classes will prepare students for future studies in business and prepare them to take more specific business courses if they choose to pursue a higher degree. Some of these courses may include:

â€¢ Statistics

â€¢ Microeconomics

â€¢ Financial Accounting

â€¢ Marketing Strategy

â€¢ Operations Management

â€¢ Macroeconomics

â€¢ Global Institutions & Political Economy

Advanced degrees in business can prepare students for leadership and management while increasing their knowledge of business operations. Students pursuing an advanced degree, such as a masterâ€™s in business management or doctoral degree, can choose a specialized area of business to study. Marketing and finance positions are common areas of work among business graduates.

Education Programs

Degrees in education allow students to pursue their dreams of teaching. Many individuals have a desire to teach others and an education degree can prepare students to teach in an area of study they prefer. Chicago colleges and universities offer a variety of classes that allow students to combine teaching skills with another area of study.

All students should make the effort to ensure the college they are planning to attend is accredited. This is especially recommended for schools that offer online education. Many Chicago colleges and universities offer distance learning classes for busy students. Checking the educational background and success rates of the school can help guarantee a high-quality educational experience.
