Article published on March 16th 2012 | Education

â€œFree the childâ€™s potential, and you will see him transform into the world â€œ, a quote said by Maria Montessori, an Italian physician and humanitarian is a true statement for the children of the 21st century. Children are always curious about every other fact or phenomenon they learn everyday. The early education starts for children from a play school where they learn the basic knowledge about life and people. Playschools not only provide an overall development but also makes a childâ€™s brain matured from just an innocent mind into a thinker on a basic level.

Children in playschools are more likely to get acquainted with others soon after they adapt to the environment of the school. They develop social skills, thinking ability, gradually analytical reasoning and reading and writing abilities as well. There are many reasons why playschools are important. Firstly, â€˜the brain develops fastest in the first four yearsâ€™: it absorbs every information which is new and stores it in order to be used whenever the same situation arises in front of the child.

The second most important factor is the â€˜structureâ€™: when children get used to the structure their minds look forward to learn a new set of things and this gradually lays the foundation of stableness and concentration which are extremely important factors for faster development of the kids. The third most important factor is â€˜socializingâ€™: this helps them to understand others, forget multi-cultural differences, learn how to listen quietly and converse with etiquettes; along with this they also learn how to help mutually and gain and develop an understanding with the others, children also learn about compassion and empathy.

It takes time to develop these skills and qualities, however it also is beneficial in the long run as they should always remember that the world does not surround them alone, and there are different kinds of people all over the world. The fourth most important factor is â€˜academicsâ€™. In todayâ€™s world academics play an important role in the formation of a better career that brings considerable growth in the child as a human being. It is important because the career of children is a symbol of their paramount success in life.

This can only happen when their educational base is strong. The foundation starts right from when the kids are toddlers, though; it is a long process but the benefits are rewarding to the children when they morph into an adult. Last but not the least is the fifth important point â€˜independenceâ€™. Preschoolers should become independent not only because they are admitted there, but they should gradually start understanding that their mother cannot sit all the time with them to get their work done.

Children should become independent, this not only helps develop team work skills but also shows their credibility to the others who can depend on them. Gurgaon is an upcoming millennium city where a lot of preschools are coming up however parents need to check which playschools suits best for their child. They need to ensure premises safety, hygiene, dedicated and educated staff and proper equipments which are fit for toddlers. Lastly, parents also need to remember that wherever they are admitting their child, the playschool shouldnâ€™t be far from their home.
