In order to make a career in the software industry, you need to be armed with certain skills most people donâ€™t have and this includes doing a course in quality assurance. In the software industry, you need both theoretical as well as practical skills and therefore, even though you can utilize quality assurance in any industry, it is of more importance in the software industry. If you are looking to intern at a giant software company and want an edge over the other hopefuls, quality assurance training Chicago just might give you that edge. However, quality assurance is not only important for novices to gain foothold in the industry; it is equally important for professionals to know about it as well. These skills are transferrable and applicable in almost any industry be it business or otherwise, and hence you donâ€™t need to worry about being stuck in a job you donâ€™t like.

You can get a QA course outline Chicago in order to work out whether you want to learn only the basics, or whether you want a more advanced knowledge. At the introductory stage, the course involves only the basics, but as you go up the levels, the course becomes tougher and you get a more thorough and complete knowledge about the subject. Testing is at the core of quality assurance and therefore various testing strategies are taught in the course of QA training Chicago like forming test cases and plans, test scripts, test summary reports, test strategies, test scenarios and the like. Students are not only taught the strategies, they are also taught how to apply them in different situations. STLC or software testing life cycle, traceability matrix, RUP, agile and stuff like testing data, strategy planning, test reports, logs and knowledge about manual testing tools are taught to students.

Apart from testing strategies, the QA course outline Chicago also teaches documentation methods like functional requirement document and business requirement document. Customer and server web applications are also part of the curriculum. The course regarding quality assurance in any reputable software institute will include methods like black box testing, grey box testing and white box testing. Testing types like integration testing, system testing, acceptance testing, regression testing, functionality testing, stress testing, sanity testing, smoke testing, security testing, compatibility testing, load or performance testing and unit testing are also taught in the course.

The essence of QA training Chicago is to enable members of the team to understand the demands of the project and its challenges right at the beginning, so that errors and glitches can be sorted out right at the start of the project and the quality of the job remains unhindered. Various methods like defect tracking and defect priority and report are used to ensure that the project remains top notch. Therefore, if you want an edge over others in the software industry, opt for quality assurance training Chicago so that you are one of the best, if not the absolute best.
