Relevant MEWPs courses in the Market

by Czeslawa Wakefield

Article published on July 10th 2012 | Education

In any working at heights industry, there would most likely be occasions where mobile elevating equipment or machineries would be used. It is important to ensure complete safety when using such equipment or machineries which are heavy, expensive and dangerous.

Those involved in this industry should take on relevant MEWP courses before indulging in the related operations.

Course training

MEWP or mobile elevating work platform courses allow one to understand the mechanics and electronics of such machineries and equipment to use them safely and effectively. Work can be handled and completed well when the right knowledge and skills are applied; this comes through taking up the appropriate MEWPs courses which are available in the market.

The MEWP Operators training course is a one-day course that is IPAF accredited. It is the agencyâ€™s most popular MEWPs course which can attract as many as 90,000 delegates every year at all IPAF approved training centers.

The course may be short but it covers sufficiently on the duties, responsibilities and safety aspects of the workers at height with relevant knowledge on the necessary MEWP equipment and tools.

MEWP courses would cover static vertical, personnel platform, static booms, van trucks, trailer mounts, mobile verticals, mobile VPP and booms.

Qualification

When the course candidates successfully complete this MEWP training, they would receive the coveted IPAF photocard, certificate, Operators Safety Guidebook as well as the PAL Card log. These esteemed entities would enable the candidates to be marketable in the construction industry for 5 years. After which, retraining or upgrade courses are highly recommended.

This qualification is necessary as part of the Work at Height regulations requirement by the state to ensure complete safety and successful development during and after the project. This MEWP qualification would equip the candidates with the relevant technical information on MEWP, tools, resources, safety and health issues with practical sessions for experience before entering the work field.

Supplementary courses

In line with the MEWP training, there are other related training courses to supplement the knowledge and skills picked up at MEWPs courses. These include PAF Scissor Lift, Scissor and Boom, Cherry Picker and Ladder Safety courses.

These are all IPAF approved courses which are relevant to the construction and development industry. There are more than 500 training centers which are IPAF approved worldwide to cater to the global development industry. These courses are recognized by many nations such as UK and USA. Their programs are certified by TUV which is ISO 18878:2004.
