Scaffolding Safety Training Career by Wesely Gordon

Article published on May 15th 2012 | Education

Every building or home that is built would require some form of scaffolding as there would be a height element in its built-up. Even for a simple single-storey home, there is an element of height where the builders need to build walls and ceilings higher than 6 feet. The roof would need to be placed properly over the walls and pillars to form a secure home. The proper scaffolding equipment, techniques and materials must be applied to ensure safety and functionality of the building and occupants.

Training course

Although many consumers may take such scaffolding works for granted, they form an important aspect of safety in the building up of a property. There are various types of scaffolding safety training courses in the market to cater to the different types of buildings, constructions, properties and environments such as single-storey homes, double-storey houses, apartments, townhouses, condominiums, hotels, high rise offices, skyscrapers and modern architectural pieces.

Every building requires a CCNSG safety passport or commonly known as SCATS card to ensure the safe functionality of the building. There are the basic scaffold safety awareness training and working at heights safety training courses in the market as buildings keep coming up in every town and city.

Course relevance

It is important to have every construction worker understand the dangers and risks in heights related jobs especially in the construction line. They should undergo the Scaffolding course in Fall Prevention and Harness inspection which ensures that the harness is applied correctly for their own safety during work.

Every scaffolding course must be relevant to the workers on a height related activity to ensure complete safety. Training must be provided for these workers with their managers going for management courses in scaffolding operations and assessments.

Every course must have the correct course manual to allow course participants to have easy reference on any learning aspect during and after the course.

Higher positions

It is possible to be climbing the ladder with simple safety training courses such as scaffolding systems courses. Besides the mentioned scaffolding management course, one could undertake the next level safety training course such as System Scaffold Inspection and Rescue training course, Asbestos and Materials Awareness for Scaffolding, Health and Safety awareness courses related to scaffolding to move up the corporate ladder in scaffolding management.

There are very few diligent and skilled candidates on the deeper aspects of scaffolding systems. Hence, anyone who is trained and qualified in these higher levels of system scaffolding would enjoy better career opportunities.
