The Advantages of Getting a PhD in Education by Robin Tylor

Article published on June 3rd 2012 | Education

College graduates face more competition in the workforce than ever before. Earning a PhD Education degree, however, can help job-seekers qualify for rewarding, challenging careers. Nipissing University offers an Education PhD program that prepares students for the challenges of the real world.

Anyone interested in a career in education can benefit from a PhD Education degree. Most schools require their teachers to hold master's degrees. Getting a PhD, however, sets applicants apart from the crowd, giving them a better chance of securing highly sought-after positions.

Earning a PhD can also prepare students to work in school administration. This allows them to create careers that focus on the macro-level issues in education. Instead of teaching a single course, they might help develop curricula that prepare students for standardized tests and higher education.

A PhD in Education can also qualify students to teach at the college level. They might also perform research that can help shape educational policies and influence the way that educators teach their students.

Getting a PhD Education Degree from Nipissing University

Nipissing University's Schulich School of Education promotes a liberal arts education that fortifies critical thinking, reading, and communication skills while encouraging students to participate in interdisciplinary studies. PhD graduates of the Schulich School, therefore, have an advantage over job-seekers who attended programs that only emphasize vocational training.

Critical thinking skills benefit individuals throughout their lives. Honing these skills at Nipissing University gives students the ability to evolve with changing educational policies and workforce needs. Graduates with a background in the liberal arts do not rely on rote skills to do their jobs. Instead, they can approach each issue from a critical perspective that helps them make informed decisions that benefit their students and their careers.

The critical reading skills that students get at the Schulich School will also benefit graduates throughout their lives. These skills not only help them stay abreast of the latest trends and research in their careers, but also allow them to make better decisions in their personal lives.

Communication is an important skill that many college graduates do not develop when they stick to a vocational training plan. A liberal arts education, however, requires PhD students to hone their writing and speaking skills so that they can succeed in the real world.

Anyone interested in pursuing a career in education or administration will benefit from the PhD program at Nipissing University. The programs combination of practical skills and liberal arts learning gives them the ability to succeed in practically any job position.
