Variety of Scaffolding Training Courses by Czeslawa Wakefield

Article published on August 24th 2012 | Education

Work at heights requires absolute alertness and 100% concentration on the job to ensure safety of one and all at the work site. A blink of an eye can cause serious injury with possible death. Hence, it is not surprising to have the local authorities come on with strict legislation on safety at working at heights environments.

Legal Requirements

Most municipals would have some form of legislation to ensure safety and health at the work place. For example, the 2007 Construction Regulations on Design and Management requires all parties such as employers and employees in construction to be competent in health and safety issues through the necessary training on a regular basis.

The Construction Skills agency would ensure that all managers, supervisors and construction workers would undergo the required scaffolding training courses to equip themselves with the knowledge and skills in being safe while on the job in a high environment.

Available courses

There are many scaffolding training courses which those in the construction industry can take to enhance their skills and techniques in scaffolding. CISRS is one of the more renowned Scaffold training centers in town. They offer many appropriate scaffold courses to benefit those in the scaffolding and construction environment.

The scaffolding courses available in the market are the CISRS Part 1, Part 2, Skills Test, SSPTS Ringscaff, Basic Scaffold Inspection and Scaffolder Advanced course.

CISRS stands for the Construction Industry Scaffolderâ€™s Record Scheme which is an accredited body to conduct scaffold courses. Their 30-year establishment has lent credit to their reputation and professionalism in conducting the scaffold courses, making it one of the oldest accredited scaffolding training centers.

Overview

Scaffold courses are conducted in one day for the basic course while advanced courses may take up to 10 days. Course candidates would need to take a simple multiple choice test at the end of the course; those who are successful with any CISRS scaffold course would be eligible for a CISRS certificate in Scaffolding, a CISRS photo card and guidance notes.

CISRS qualifications on scaffolding are widely recognized and accepted throughout the world. These qualifications have been a boost to thousands of scaffold workers since the inception of CISRS courses in 1979.

There are many scaffold safety training courses offered by qualified CISRS training centers with the right premise, facilities and facilitators. There are other related training courses to scaffolding which one can take on to improve the skills and techniques of the scaffolder such as the Ladder safety course, harness safety course and health courses.
