What Makes Summer Training Completely Different by Ashutosh Kaushik

Article published on February 17th 2012 | Education

Summer training is believed to be the foundation for a sucessful technical career ahead. This training program is the key factor which is considered during campus recruitments and placement programs. As, at the fresher level it is very tough for companies to check technical caliber of the students. And company find it difficult to know about technical attainments of students while their recruitment processes. Only summer training gives them option to know technical skills of students. As throughout the four years of engineering academic session, only summer training is the part where students really learn technologies practically.

The final year project which is considered to be the most important part of final year curriculum is covered during the summer training program. This is the main reason behind making summer training a compulsion after third year. As,after third year various companies visits colleges for recruitment of final year students for their several jobs. The key factor which decides the future of the students is strong technical knowledge of students. The stronger are the technical skills of the students, the more are chance of students to get selected in top IT & Embedded Companies. And summer training is the best time to learn any technology. Because summer training is specially designed for imparting technology practically among the students.

During the final semester students have to submit their final year or major project and also have to answer question based on the project and technology used in the project. And it is very tough to prepare a quality project and to have sound technical knowledge without summer training. Because during college lecturers and professors put more emphasis on class room teaching as their main priority is university semester examinations. This is the main reason behind poor quality engineers in the market nowadays.

That is why companies are considering the project work and summer training for their selection processes. And students have also started taking their summer training very seriously from past few year because they know the fact the harder they are going to work during their summer training, the higher will be the possibilities of their selection.

Another added advantage of summer training is students get a chance to learn professionalism and become industry ready professionals before entering the corporate sector. Moreover, students get to know more about corporate sector working while doing their summer training program.

The best for gaining maximum out of your summer training is to choose a well established company for summer training rather then any other option. Because while working as intern or trainee in these companies students get chance to work with professionals having great experience and technical skills. Students can learn a lot from these companies and professional and students don't faces any problem while doing their first job they have a idea of corporate sector working in advance and have great chances of getting selected as they are industry ready professional and company don't have to invest money and time for training them.

Summer training will be started by first week of May in most of the standard training and development companies. Usually, these companies have limited seats for summer training interns and it is very tough to get enroll as trainee or intern for students willing of doing summer training from these companies. The best option is to enroll in advance for surety of training.
