Why the smtp mail server is necessary? by [Lee Rio](#)

Article published on March 28th 2012 | [Email Marketing](#)

Earlier, the major way of communicating with people of one place and another was to write a long letter and posting it with a high hope of getting back replies. But it can be considered as the story from the fairy tale now. There have been drastic changes and reforms in the world in all possible spheres. This has also influenced the communication process to a huge extent and thus it is now just a matter of seconds to reach out to people on the other part of the globe.

The concept of wireless technology has caught on with the public and with the help of the latest innovation in terms of SMTP mail server, successful communication between two people takes just a few seconds no matter which part of the world they belong to. With the help of the smtp relay services, now two users can sit at the comfort of their homes in two parts of the world and exchange pleasantries through emails.

There are several limitations and restrictions that have been posed by the ISP servers regarding sending of emails to different network. That has certainly been done keeping in mind the broader aspect of security because any lack of security means misuse of the network and the email service for destruction. But with the advanced standards in terms of the smtp relay services, it is now much easier for the users of all networks to communicate with each other. The smtp mail server looks into the fact so that no misuse of the network happens.

Sending emails have become very easy for the users with the help of the smtp relay services and the smtp mail server. But they need to make use of the extended commands when a user sends bulk emails to different recipients for the purpose strictly professional. Some of the steps that you can follow as an user to access the remote email access are as follows:

Set up an email account with the relay services and keep the record of the default smtp settings. Then launch the account and select all the relevant options to configure your mail account. Next customise the smtp settings as per your choice of configurations with the help of the details available from the relay services. Repeat the entire process from the very beginning in case you have more than one email account. Once these are done, your email account is ready to make use of the smtp services.
