Article published on April 18th 2012 | Entertainment

The Bubble trouble is the game to shoot the bubbles in one chance without being in contact with the characterâ€™s body. When you proceed with this game, a huge bubble will appear on the screen and once you will shot the balloon, it will break down into small bubbles which will be again shot by the player in a continuous speed. The player has to protect himself from the direct contact with the bubbles because if the player comes in contact with the bubbles or any of the character then the game will come to an end. On the other hand, the more bubbles in bubble trouble you will shoot the higher will be your score and quickly you will move to the next level.

One and Two Players Format

In this game you have an option of playing either alone or with your friend as it has a format of choosing number of players. If one player is playing the game he can use the left key, right key and the space bar in order to move the character in right direction, in lift direction or to shoot the bubbles respectively. Whereas, when the game is set on dual playersâ€™ mode, the second player can make use of the WAC keys. Here WAC keys indicate the following movements â€“ W for shooting the bubble, A to move character to the left and C to move the character to the right direction.

On the other hand the game can be operated by the player with the help of mouse by using its left click to shoot the bubbles, and can move the character in left and right direction by moving the mouse. But it is also true that if one player is playing with the mouse then the option of the mouse will get disabled for the second player automatically and he has left only with the option of keyboard.

Moreover players can set the keys as per their compatibility in order to move the character. They are free to choose the keys with which they feel comfortable. Apart from this, they can also adjust the audio level as per their need.

The game is easily accessible online and can also be played in offline mode just by downloading it. To make the game more interesting player can choose the different layouts. The general information regarding the scores can also be seen on the screen. After the completion of the game, highest scores can also be viewed by the players.
