Article published on April 3rd 2012 | Entertainment

Most homes today are experience new levels in entertainment. The advent of Digital Cable TV that comes with amazing picture quality with matching sound has ensured that there is quality entertainment around the clock. High Speed Internet has also witnessed changes that are advantageous. The blazing speeds at which the services are available have made it possible to not only browse the web but also to download latest hit movies, larges music files and stream videos as well. The communication scenario has also advanced with technologically brilliant features being incorporated in the home phone service. Most service providers offer all three services in a compact bundle that saves a lot of trouble as there is an easy to read bill

Over hundreds of channels that come to you with stunning clarity and amazing theater-like sound. Programs include the latest hit movies, exciting fashion shows, reality shows, sporting events, news â€“ local and national, and the list is almost endless. There is a technologically advanced device called the DVR which can do really amazing things. You can record up to 2 programs while watching another. You can even pre-set your recording preferences and have the DVR do the job while you are away at work. The other great feature is that you can even record from wherever you are, either through your computer or your smart phone. The device is smart enough to let you go back up to 72 hours to retrieve programs that you missed and bring them back on screen for you. To top it all you can live pause, rewind and fast forward at will so that not a moment of the excitement need be lost. For people who prefer specific programs by choice, there is a feature called On Demand that gives you access to thousands of movies, shows and prime sporting events that you can view any time you want.

The High Speed Internet service that is provided these days is simply amazing. Most providers use a technology called WiFi that enables you to access the Internet anywhere in your house without messy wires trailing all over the house. You can go online from any part of the home and the best part is all members in the family can go online at the same time without the speed getting reduced. Download speeds up to 50 Mbps are available so much so that downloading the latest hit movies takes just minutes, as also downloading large music files and streaming videos. Most services providers also keep your security in mind and include a security suite that helps keep away viruses and malicious spyware that could otherwise harm your computers. The best part is that this facility comes without any extra cost. Youâ€™ll love the control you get through Parental Controls that helps keep away the kids from unwanted websites and no unwanted content can even get downloaded by mistake.

The home phone services that are available today come with amazing user-friendly features that you simply canâ€™t do without. Features like Caller ID help maintain privacy by letting us know the identity of the caller. A better version of the same feature is Caller ID on TV that helps you detect the identity of the caller on your TV screen itself. Call Forwarding is a feature that ensures that no important calls are missed. Voicemail is an important feature that is more like a personal messaging service. You may be away at work and all calls get recorded for you to retrieve at leisure. 3-Way Calling is a feature that helps you converse with 2 people at the same time irrespective of their locations. Add to this the amazing calling plans that give you unlimited calling across U.S., Canada and Puerto Rico which simply means that you donâ€™t have to worry about the minutes any more.
