

Article published on December 20th 2011 | [Entertainment](#)

Actually truth be told, I love it in the car mostly whilst driving through traffic, it keeps me sane! The kitchen is another area where the radio is useful, cooking or washing up cutlery is far more entertaining to the beat of a song, or even to the news or maybe a debate. Why not have a little dance while you work? Ah, the radio, relieves boredom, relieves stress, drown out the noise of the other household members all round it is a wonderful invention. How many of us have tried tuning into other foreign stations just to hear the sound of an unknown language and dream of perhaps visiting that country?

Bring on the latest lovely tool to add to our Radio, the online FM Radio Websites which can then be used to download onto our Ipod. Anything from the news, to chat shows, debates to music, the whole choice is there waiting to be enjoyed. Download and listen anywhere, anytime – but perhaps not in front of the boss at work! Unless you are the boss, then everything is fine.

There are some wonderful FM Radio sites online, simply pick one and register then you are free to listen away to your heart's content from Live FM Radio. No matter if you are not online, even if you are out in the rural areas with just a radio set, it will still receive FM from your nearest town to keep you up to date whilst you view the beautiful scenery. From the town direct to your ears, all the important news, and weather will still reach you there. Online FM Radio really has grown over the last years, bringing specialised sites to the fore. Some are even designed to keep a record of what you listen to and offering it to you before you even touch your mouse to find it. The younger Web Designers are naturally pulled in to the world of music and advertising; of course they would rather be working with pop music than running a shop!

Where would we all be without Radio FM? As most of us are now stuck online or at least working on a computer in our daily job at least we still have the ability to know what is going on in the outside world. We need those all important weather or natural disaster warnings, well in advance of their onset in order to get to safety quicker. You simply cannot go wrong with online FM Radio, as long as your broadband is stable, then it is always there. The elderly have taken to computers, I note they still have their old wirelesses tucked away in a safe place – it's my emergency radio dear! – they won't be needing an emergency radio with online Radio FM. No fiddling around with dials and buttons, no sudden loss of sound when an aeroplane flies past and no annoying buzz when a neighbour uses a lawn mower or hairdryer – those Days are long put to rest and about time too! We are online baby – all the way!
