Tips for Buying Car Stereo Systems by Jon Smith

Article published on December 3rd 2011 | Entertainment

A car without stereo seems to be dull. A car stereo system brings more enthusiasm to your each drive. In fact, when you have stereo in your car, your car becomes your real companion. However, if you are planning to buy new car stereo or want to upgrade existing one, you should be aware of the features that a good stereo system must possess. Following points can help you in this regard:

â€¢ Look for car stereos with good amplifier power. Amplifier power can tremendously affect your overall enjoyment of music. If you are not planning to add any additional amplification, make sure you have enough to power your speakers. If you have plans to add amplification power in future, look for a CD head unit with preamp outputs.

â€¢ Make sure your music system is equipped with easy to read display at a glance and check its visibility both with daytime glare from the sun and at night.

â€¢ Check for auxiliary input in your car stereo system which allows connection to a portable music player and other external devices. It should be equipped with USB port to integrate a portable music player into the system. You can also charge device battery and connect a USB flash drive and play music files stored on it. Many car stereo systems have a built-in front audio aux in, a single connection to make listening convenient.

â€¢ Bluetooth has also become common feature in car stereos so you can transfer a call to your audio system and can hear a caller's voice through the speakers. It will help you talk on your phone through hands free system and stay focused on the road while driving.

â€¢ A good car stereo system should be accompanied by a separate sub woofer. It will help to hear music with low bass and great overall clarity. With such low bass, you will be able to notice even little details in familiar songs which you would have never noticed before.

â€¢ For those who are looking for an advanced car stereo system, a car stereo with voice command can bring real convenience for them. Such system will allow you to change radio stations, CD tracks, call up specific songs and playlists on a connected music player through voice recognition.

As there are so many brands of car stereo systems available in the maker, it is advisable to buy one from reputed brand with advanced features and reasonable price. If you donâ€™t want to buy a new one, you can upgrade existing with advanced components.
