Article published on February 20th 2012 | Entertainment

YouTube probably has the biggest online video resources. It got billions of billions of videos in its servers and anyone can watch them. No matter where you are, no matter who you are, you can just go to YouTube and start browsing through its rich collection of videos. You can find almost any kind of video in here. You can find videos starting from trailers, scenes, cut shots, sneak peeks, making of, gameplay to music videos, movie parts and what not? And the great part is that it is absolutely free. You do not even have to login to watch them.

YouTube do not let you download the videos but it does stop you to download them either. What I mean is that there are no direct download links on YouTube, but if you apply other methods, YouTube will not stop you.

YouTube uses FLV video format for its videos. FLV stands for Flash Live Video. FLV is very much popular online as it is small in size, it has great streaming capabilities and it uses chunks so that viewers can start watching the videos before the whole download is complete. There are usually 5 types of video quality options in YouTube. They are 1080p, 720p, 480p, 360p and 240p. If the videos are HD then lower resolution version is always available. But that is not true for the lower resolution videos. 240p to 480p videos are usually available in FLV formats. HD videos are available in MP4 format. But number of FLV video is much higher than that of MP4 videos.

If you want to watch the YouTube videos offline, you will have to download them and chances are that they will be in FLV format. So, if you want to enjoy those files in iTunes, you will have to change the FLV format. If the videos are in MP4 then it will not be an issue as iTunes support MP4 format. But iTunes does not support FLV format. So what how to play those FLV videos from YouTube to iTunes?

Answer to that problem is to use a video converter. Video converters are handy tools that can convert between different video formats. But there are some video converters that lower the video quality while converting the format. The FLV videos from YouTube are already of lower resolution. If the video quality gets any lower, you will not be able understand anything on the video. So, you have to choose a video converter that can keep the video quality unchanged. Also, you should choose a video converter that gives you a wide range of format choices. You may want to convert to and from other formats as well. Using different converter every time you decide to convert a video is not practical.

Video Converter for Mac is an excellent converter choice. It shows superb quality in conversion process. It keeps the video quality as it is and it gives huge number of format choices to choose from. The interface is easy to use so even if you are new, you will not face any problem.

With this best video converter you can now convert YouTube to iTunes and enjoy them offline.
