The beauty of the Yinlips is the fact that the potential for scalability is vast. For instance the initial gaming manager was restrictive in the sense that it was the single port of call for all a gamers ROM's. The import of this is that you needed to only load it and choose your game for any system. This was the modus operandi that the system relied upon. However uninstalling it(the game)was an issue. This logjam was fixed by having alternative firmware that allows for the mapping of hardware buttons.
